

50W LEDcode2 'Dim to Dark' LED Driver

SOLOdrive

SOLOdrive offers industry-best Natural Dimming to dark - LED dimming made beautiful! With any dimmer, in any application. Symbiosis on SOLOdrive stands for unity, for the SOLOdrive working seamlessly together with LED modules, controls and intelligent luminaire elements.

Product offering

1)- an	SOLOdrive 560/U Intelligent LED DriverController Input Current: 0.654 max LED output voltage: DC = 60V LED output voltage: DC = 60V LED output power: 50W max	n: 86% typ PF: >0.9C THD: <20% Tai: -20°C to +50°C	AC 120-250V, 50-00HU DC 120-250V (C + 60 °C	SELV CE L DALL SPANS AC 120-27 PV. 50-40 PG SUMMAN TYPE TI.	Disconnect power when installing or servicing. Install in accordance with natural and local electrical code. CAUTOR Counsel driver case to wred proteins affect hazard.

SOLOdrive 568/U

Part number (P/N)	SL0568U2
Product description	SOLOdrive AC, 50W, LEDcode2 + AUX, 1 control channel, constant current, 1.5x 55V output, side feed, long metal

Features & benefits

Natural dimming	Dim to dark, smooth brightness changes, excellent flicker performance, adaptable dimming curves, configurable minimum dimming level
Symbiosis	Seamless interoperability with LED modules, controls and in-luminaire intelligent devices
LEDcode	LEDcode2 connects to integrated digital accessories, supports location-based IoT applications and enables wired and wireless lighting control through LEDcode peripheral devices
Programmable	Fine-tune your driver for any application
Performance	Universal input voltage range, low inrush current and total harmonic distortion (THD), high power factor and efficiency
Camera compatibility	Hybrid HydraDrive technology is proven to work in TV studios and security camera environments

Programming tools		
Programming interface	TOOLbox pro (TLU20504)	
Programming cable set	TOOLbox pro to LED driver, programming cable, 5pcs (TLC03051)	
Programming Hand-held, Touch-and-Go	PJ0035HH1	
Programming jig	PJ0500U1	
Programming software	FluxTool	

Warranty

Order number configurator

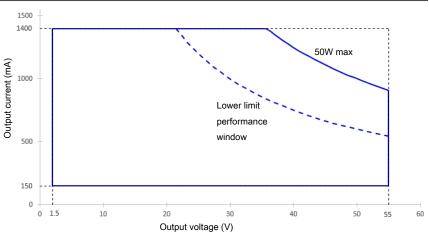

P/N	LED driver part number.
LED output current	Enter value in 1mA increments, e.g. "811" for 811mA

Input characteristics	
Nominal input voltage range AC	120 - 250V (ENEC), 120 - 277V (UL)
Nominal input voltage range DC	120 - 250V
Maximum input current	0.65A @ 120V / 60Hz
Input frequency range	50 - 60Hz
Efficiency at full load	86%
Power factor at full load	>0.9
THD at full load	<20%
Maximum inrush current	< 200mA ² s @ 120V / 60Hz
Surge protection	2kV differential mode (DM) 2kV common mode (CM)
Maximum standby power	<0.5W
	If no load connected to the AUX output

Output characteristics

Maximum LED output power	50W		
Number of LED outputs	1 (UL Class 2)		
Programmable LED output current range	150 - 1400mA		
LED output type	Programmable in 1mA increments within specified current range		
LED output current tolerance	+/- 5% at programmed LED output current		
LED output voltage range	1.5 - 55V		
Auxiliary output	15.5 - 25V DC, 18mA max		
Operating window	1500 - 1400 - 50W max		

Control channels	1
Control protocol	LEDcode2
Dimming range	100% - 0.1%
Dimming curve options	Logarithmic (default) Linear
Dimming method	Hybrid HydraDrive
Dimming curves	100 90 80 100 100 100 100 100 100 100

Environmental conditions

Operating ambient temperature (Ta) range	-20 °C to +50 °C
Maximum operating case temperature (Tc max)	80 °C
Lifetime	50000 hours at a maximum case temperature (Tc) of 80 °C
UL Type TL	Measured Tref: 67 °C Maximum allowed Tref: 86 °C Measured at 1400mA

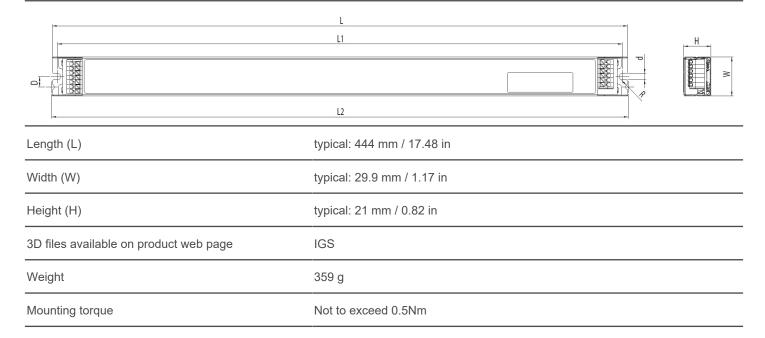

Thermal	The LED output current is decreased whenever the internal LED driver
THEITHAL	temperature exceeds factory preset temperature. The LED output current is
	increased again once the internal LED driver temperature drops below this
	internal temperature threshold. If the internal LED driver temperature continues
	to increase, despite a decrease in output current, the LED driver will shut down
LED output short circuit	The LED output current is cut off whenever the LED driver detects a short-
	circuit. The LED driver will attempt a restart every 400ms after a short-circuit is
	detected.
LED output overload	The LED driver decreases the LED output current sequentially, until it reaches
	its maximum rated power, whenever a load that exceeds the LED driver's
	maximum rated power is connected to the LED output.
Reverse polarity	The LED driver will not yield any current if the polarity of the load on the LED
,	output is reversed. This situation will not damage the LED driver but may
	damage the LED load.
LED protection	
Thermal protection LED	An external NTC thermistor, which is placed on a PCB near the LEDs, can be
morniai protection LLD	
Thomas proteotion EED	connected to the driver via the LEDcode/NTC terminals. The output current to
Thermal protection LLD	connected to the driver via the LEDcode/NTC terminals. The output current to the LEDs is then decreased by 75% whenever the NTC exceeds a maximum
Thermal protection LLD	•
Thermal protection LLD	the LEDs is then decreased by 75% whenever the NTC exceeds a maximum
Thermal protection LLB	the LEDs is then decreased by 75% whenever the NTC exceeds a maximum allowable temperature, which is specified by the user in the FluxTool software.
	the LEDs is then decreased by 75% whenever the NTC exceeds a maximum allowable temperature, which is specified by the user in the FluxTool software. The default NTC temperature limit is set to 70 °C.

LED driver mechanical details

Connector layout

Input wiring specifications

Connector type	push-in terminals
Connector supplier and series	Wago 250 series
Wire type	solid or stranded copper
Wire core cross section	0.5 - 1.5 mm² AWG 20 – 16
Wire strip length	9.0 mm

4	Risk of electrical shock. May result in serious injury or death. Disconnect power before servicing or installing.
ŢŢ.	The LED driver may only be connected and installed by a qualified electrician. All applicable regulations, legislation, and building codes must be observed. Incorrect installation of the LED driver can cause irreparable damage to the LED driver and the connected LEDs.
	Pay attention when connecting the LEDs: polarity reversal results in no light output and often damages the LEDs.
<u></u>	LED drivers are designed and intended to operate LED loads only. Powering non-LED loads may push the LED driver outside its specified design limits and is, therefore, not covered by any warranty.
	eldoLED products are designed to meet the performance specifications as outlined at certain operating conditions in the data sheet. It is the responsibility of the fixture manufacturer to test and validate the design and operation of the system under expected and potential use cases, including faults.
(i)	Please observe voltage drop over long cable lengths. Longer cable lengths increase EMI susceptibility.
(i)	Product renderings and dimensional drawings are generic for the housing type. Product label, connector type and quantity may vary.
