

LEDLUX LX linear

Safety instructions

Electrical devices may only be mounted and connected by electrically skilled persons.

Serious injuries, fire or property damage possible. Please read and follow manual fully.

Fire hazard. Do not connect the LED luminaires to the mains voltage. The LED lamps will be destroyed.

The LED luminaire is a device of protection class III. During installation and cable routing, comply with the regulations and standards which apply for SELV.

Avoid bending of the light inserts. This can cause damage. Light inserts with a lengths of more than two meters must always be handled by two persons.

Only the manufacturer may exchange the connecting cable.

These instructions are an integral part of the product, and must remain with the end customer.

Device components

Function

Intended use

Linear LED luminaire system with integrated LEDTRIX interface and constant current regulation. Operation with constant voltage DC 28 V SELV.

Beam angle and degree of protection diversify according to the different versions. Various light colours can be set according to the LED equipment (see "Activation").

Areas of use dependent on the specified degree of protection (see device label):

- IP64: Indoors and protected outdoor areas
- IP20: Only indoors

When mounted in outdoor areas, provide additional protection against heavy rain (e.g. facade profile instalight 4010).

System information

This LED product possesses a LEDTRIX interface. A LEDTRIX data encoder is required for operation.

Suitable data encoder:

- instalight Control LEDTRIX-Master (50913000)
- DMX-LEDTRIX Gateway 2-gang (51688014)
- instalight Vario Basic device (V2 GR 001) with LEDTRIX interface module (V2 FM LX 001)

Control

The following allocations of channels apply for control via DMX512-A, if the DMX-LEDTRIX Gateway listed under "System information" is used.

Allocation of channels - RGB

Table with 2 columns: Control channel, Description. Rows: 1 (0...255) Brightness red, 2 (0...255) Brightness green, 3 (0...255) Brightness blue.

Allocation of channels - RGBW

Table with 2 columns: Control channel, Description. Rows: 1 (0...255) Brightness red, 2 (0...255) Brightness green, 3 (0...255) Brightness blue, 4 (0...255) Brightness white.

Allocation of channels - TW ("Tunable White")

Table with 2 columns: Control channel, Description. Rows: 1 (0...255) Colour temperature 2700...6500 K, 2 (0...255) Brightness, 3* Free (wildcard).

In the case of automatic addressing in LEDTRIX B mode, three channels are assigned to each section. Therefore, with activation via DMX512-A, an address offset of three channels per section must be reckoned with.

Information for electrically skilled persons

Fitting and electrical connection

Mounting the LED light insert

Comply with the different mounting instructions for the IP64 and IP20 versions.

Observe the correct placement of input cable (IN) and output cable (OUT).

When mounted in an easily accessible installation environment, the LED light insert must be protected against mechanical damage by additional construction measures.

To simplify mounting as much as possible, we recommend using the retaining bracket 81081710 (Figure 2). The retaining bracket 81081700 is available as an option for particularly small installation environments. However, when the IP64 version is mounted, this also requires the use of additional spacers (Figure 3).

- Mount the retaining brackets on the substrate in accordance with the drawing. Use at least three brackets for each metre of LED light insert.
Push the LED light insert into the retaining brackets until it locks.
After locking, do not push the LED light insert into the brackets any further. This can cause damage to the plastic profile.

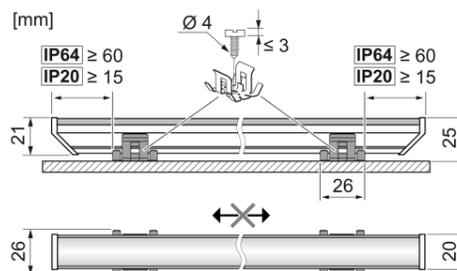

Figure 2: Mounting with bracket 81081710

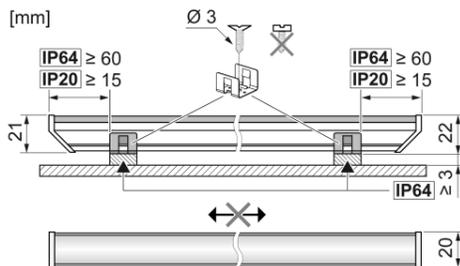

Figure 3: Mounting with bracket 81081700

Dismantling the LED light insert

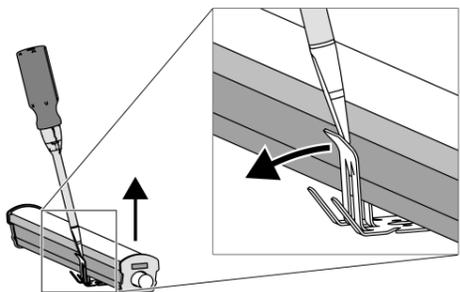

Figure 4: Dismantling the LED light insert

- Using a suitable tool (e.g. small screwdriver), bend the locking noses of the retaining brackets outwards.
Remove the LED light insert out of the retaining bracket in an upwards direction.

When using the retaining bracket 81081700, dismantling is only possible when the bracket can be accessed from the side.

Connecting the LED lamp - General

To connect the LED lamps, use only the "SNT ELI" power supply units listed under "Accessories". The operation manuals of these devices contain details on connecting the power supply units.

Depending on the version of the LED lamp, the electrical connection may change. The following graphics explain the different connection methods.

The general conditions listed under "Dimensioning" apply to all the LED luminaires of the type LEDLUX LX linear and must be observed when planning the system.

For connection type K, use the "Connection kit 28 V" for all the outdoor electrical connections (see Accessories). One kit is necessary per connection.

When using the "Supply unit 0-120 W IP66", turn the operating mode switch (14) to A.

Connection assignment

Dimensioning - General

Observe the different dimensioning tables for LEDLUX RGB/RGBW and TW!

When the cross-section is doubled, the length of the supply line can also be doubled, without reducing the number of connectable LED luminaires.

The total cable length between the data encoder (7) and the last LED luminaire may be max. 200 metres.

The total power per supply may be max. 120 W.

The cable length between two LED luminaires may be max. 20 metres.

The maximum permitted cable length between the data encoder (7) and the first LED luminaire is dependent on the type of data encoder use and can be found in the following table:

Table with 2 columns: Data encoder, Cable length*. Rows: instalight Control LEDTRIX Master (100 m), DMX-LEDTRIX Gateway 2gang (100 m), instalight Vario (100 m).

* Cable length = d1+d2+d3

Dimensioning (IP64)

The following two tables show the maximum number of connectable LED luminaires when powered with a power supply "SNT ELI 0-120 W". All the values apply for standard luminaires with input and output cables each of 1 metres in length (1.0 mm²).

Dimensioning with LEDLUX LX linear RGB/RGBW (IP64) with SNT ELI 0-120 W and supply line (d1) with cross-section 2x1 mm²

Table with 7 columns: d1, L=334, L=660, L=985, L=1310, L=1636, L=1961, L=2286. Rows: 5m, 10m, 20m, 30m.

L = Length of the LED luminaire used in mm

Dimensioning with LEDLUX LX linear TW (IP64) with SNT ELI 0-120 W and supply line (d1) with cross-section 2x1 mm²

Table with 7 columns: d1, L=334, L=660, L=985, L=1310, L=1636, L=1961, L=2286. Rows: 5m, 10m, 20m, 30m.

L = Length of the LED luminaire used in mm

Dimensioning (IP20)

The following two tables show the maximum number of connectable LED luminaires when powered with a power supply "SNT ELI 0-120 W". All the values apply for standard luminaires with input and output cables each of 0.3 metres in length (0.5 mm²).

Dimensioning with LEDLUX LX linear RGB/RGBW (IP20) with SNT ELI 0-120 W and supply line (d1) with cross-section 2x0.5 mm²

Table with 7 columns: d1, L=334, L=660, L=985, L=1310, L=1636, L=1961, L=2286. Rows: 5m, 10m, 15m.

L = Length of the LED luminaire used in mm

Dimensioning with LEDLUX LX linear TW (IP20) with SNT ELI 0-120 W and supply line (d1) with cross-section 2x0.5 mm²

Table with 7 columns: d1, L=334, L=660, L=985, L=1310, L=1636, L=1961, L=2286. Rows: 5m, 10m, 15m.

L = Length of the LED luminaire used in mm

Technical data

Table with 2 columns: Parameter, Value. Rows: Rated voltage DC 28 V, Power consumption RGB 16 W/m, RGBW 16.2 W/m.

Table with 2 columns: Parameter, Value. Rows: TW 18.9 W/m, Protection class III, Ambient temperature -20...+45 °C, Interface LEDTRIX®, Lifespan (L80 B10) 60,000 h (@25 °C).

Accessories

Table with 2 columns: Accessory, Art. no. Rows: SNT ELI 0-57 W (58916030), SNT ELI 0-120W / 28V (58916023), Connection kit IP67 28V (58928011).

Warranty

We reserve the right to make technical and formal changes to the product in the interest of technical progress.

We provide a warranty as provided for by law.

Please send the unit postage-free with a description of the defect to our central customer service office:
