Light → as a solution

We are InstaLighting, the experts for lighting and building technology. We offer ideas, solutions and services that make architecture brighter, buildings smarter and controls more efficient. And that help you create unique moments – and celebrate them.

Intelligent light is more than technology – it's an enhancement for cities, tourism, traffic, ecology, shopping experiences, security and the networked world of tomorrow. That's why we don't develop rigid luminaires, but modular lighting systems that adapt flexibly to users and the requirements of projects and OEMs.

For us, simplicity is the key to everything: simple configuration, simple operation, simple logistics put the user at the centre of a project. As a solution provider, we offer a single point of contact for each project, linking all the units and interfaces so that control, mounting, light planning, commissioning and service all interlock smoothly. We combine our know-how in planning, development, production and logistics so that we can always optimally integrate into our customers' processes.

Controls → Outdoor luminaires → Luminaires for interior rooms

From one source

The Berliner Allee

Düsseldorf, Germany

The address 26 Berliner Allee in Düsseldorf is one of the prestigious and central addresses in the city. Running parallel to it and renowned worldwide for its splendid shopping area and boulevard is the Königsallee, also known as „the Kö“. After a partial renovation and an alteration to the faade, the prestigious business premises of 26 Berliner Allee which glow red and white at night, fit perfectly within these stimulating surroundings. For us the motto was: Exterior lighting under one roof.

LUMINAIRES

From the management, throughout the programming and up to the installation: All the lighting solutions and performance for this Düsseldorf project were supplied by us. The job at hand: Once the alterations on the building's facade were completed, the impact panes – which are not just for there for protection against the weather – were to be lit and enhanced by means of a sophisticated background lighting. Each single light at the back can almost be controlled in real time. We catered for a particular high-

light in which two special versions of the LEDLUX RGB and LEDLUX TW were enthroned in a fully encapsulated stainless-steel casing. At night, fascinating scenes run across the facade, created by dynamic colour displays which emit from the lighted elements. For instance, the Japanese flag sporadically appears or the building lights up in red and white to show Düsseldorf's city colours. This is particularly a special feature because normally Düsseldorf only allows for pure white.

Indestructible

The Olaya Towers

Riyadh, Saudi Arabia

The Olaya Towers in Riyadh, Saudi Arabia, rise majestically above Riyadh's Central Business District. These two imposing towers filled with office space stretch approximately 200 m into the sky. In 2013, we retrofitted the facades using our very own lighting solution which we developed in-house. It is consistent, uniform and of course aesthetically fits in with the modern arabian style.

A total of 1,310 m of instalight 4010 with LEDLUX LH were installed. Our greatest challenge, was outlining the structure of the towers with a height of 200 m and with only a limited feed capability. The solution was to connect 21 m of our light inserts together. This ensured that there are no holes or ducts in the facades for anything to crawl into.

Even when subjected to a stress test at 65 °C, the system verified its durability. Needless to say, it passed with flying colours. Since then, KNX temperature and brightness sensors

have been comfortably controlling the lighting system, which means that the lights only come on after dusk, when the temperature has already started to drop.

The 4010's clever microprism cover provides an even light coverage. It also ensures, that in the unlikely event of individual LEDs failing, no gaps will be visible to the viewers eye. This is a positive side effect which has left our client extremely happy and elated with our long-life lighting solution.

A definite eyecatcher

The Lippe Bridge

Lünen, Germany

This charming little town in western Germany unites the pulsating energy of the industrial Ruhr valley and the pastoral peace of the countryside around Munster. The new Lippe bridge is an important transport route and has increased the town's draw, as well as creating a beautiful viewing point. We are proud that our lighting technology played a significant role.

REFERENCE

Building owner: Stadt Lünen

Architecture: Schülke Wiesmann Ingenieurbüro

Light planner: tecnoPlan GmbH & Co. KG

Photo: Boris Golz

This impressive new trussed arch bridge appears lean and nimble. It practically floats above the river. You can barely tell that 42 m of handrail is covered in instalight 4020 robust LED light inserts at a height of 1.1 m, when it's lit anyway. That's because they are integrated into the grooved tube of the handrail. At night, light is distributed pleasantly across the pavement offering no glare from which pedestrians, cyclists and motorists benefit alike. The LEDLUX LH linear LED light line system is integrated into the

benches in the middle of the bridge, adding the finishing touch to the basic lighting. Built-in power supply units mean the compact modules can be directly connected to a 230 V supply, saving installation time and reducing the amount of space required. With a colour temperature of 3000 Kelvin and a high colour rendering index (over 90), the bridge bathes in a warm and cosy light provided by our LEDs, which also provide light for vision and safety with no need for pole-lighting.

Vandal-proof EKISO – Immermannhof Square

Düsseldorf, Germany

The Immermannstrasse in Dusseldorf is one of the important main junctions in the city, with direct links from the main train station to the new Kö-Bogen, to the heart of the Japanese centre and a prominent shopping area. A residents' meeting on the upgrading of the pedestrian routes and how to better connect the street resulted in several ideas, one of them being a new lighting concept.

A range of features was to improve the lighting and road safety conditions on the Immermannstrasse: innovative street lighting, highlighting the sycamore trees using floor spotlights and new footpath lighting.

Our instalight 1060 tunable white recessed floor luminaires were positioned on Immermannplatz to create an effect reminiscent of origami. This light installation is switched on using instalight control, meaning a raft of static and moving scenes turn on automatically.

We saved the best until last: the site owner himself was won over by the sturdiness of the Insta recessed floor luminaires where beforehand there had been problems with lighting installations in the vandalism-ridden area around the train station.

A stable traverse

The Willemsbrug

Rotterdam, Netherlands

Trendy harbour flair, distinctive architecture, artistic and cultural stronghold. People come from all corners of the world to meet up here, in Rotterdam. Since March 2018, Europe's largest seaport has been enriched by yet another attraction: The "Willemsbrug" – one of Rotterdam's three largest bridges which span the New Meuse, has certainly made a name for itself as Holland's "Golden Gate Bridge". The lighting technology used to impressively illuminate its pylons, foundations and the bridge's framework, was supplied by InstaLighting in two construction phases.

In 2016, to achieve an optimal light output and accentuation within the smallest of spaces, narrow and wide-beamed spotlights (instalight 3050) and facade spotlights with asymmetrical wallwash optics (1065) were installed at the pylons. The colour setting for each pylon leg is separately adjustable. For the plinth lighting, 210 metres LEDLUX LN linear and instalight 4010 with a constant 5°-optic were used.

Due to bridge repairs in 2017, the illumination had to be completely dismantled only to be reassembled again in 2018. On top of this came the demand that the lighting was to fall on the lateral framework and that no light should emit upwards into the sky. Detailed work was required here caused by the fact that a permanently installed maintenance wagon travelled a route that only left a width of 8 cm to work in. The framework was fitted with LEDLUX LX linear installed in the stainless-steel instalight 4010 profile with narrow beam 5°- optics. The lighting on the Willems Bridge is managed by instalight Control, as an add-on also by remote internet maintenance. Thanks to glass fibre cables, the lighting colour can be synchronised and centrally controlled. Thus, at night the bridge can unfold its maximal radiance.

Wonderfully watertight

The Centrumsplein Emmen

Emmen, Netherlands

REFERENCE

Realisation: 2015

Building owner: Gemeente Emmen

Light planner: Studio DL, Jan van der Tuin

Photo: Studio DL, Dirk-André Betz

The town of Emmen is home to the largest shopping centre in the north of the Netherlands, and it has a lot to offer.

Moreover, the decision makers there are really serious about regenerating the town centre, including a lighting-based metamorphosis of Boulevard Noord, Marktpluin and Centrumspuin.

The result surpassed all expectations. At the prestigious City.Light.People Award 2016, Emmen had won the public choice award as well receiving 3rd place by the jury. The outstanding factor was that each area of the town was able to maintain its own individuality but still links to each other with a common theme: a fusion of urban and rural character. For example, the lighting on the Marktpluin is positioned such way that the leaves on the trees create different shaped shadows every day.

Our challenge was to use individually operated luminaires to display an array of scenarios on the water surface and to ensure that they fitted perfectly into this newly created environment. Our instalight 1060 was the perfect fit. Now, it generates original light-and water scenarios and optical illusions, such as water lilies or shoals of fish. This innovative lighting design uses natural elements to re-inforce the urban code and identity of the town. And, most importantly, it has sustainably improved the quality of life for residents.

Maximum protection at sub-zero temperatures

Park Pärnu Vallikäär and the Tallinn Gate

Pärnu, Estonia

Estonia, a paradise for lovers of culture and nature. Pärnu is a seaside resort on the west coast of Estonia. Here, a particularly idyllic park attracts visitors to the moat (Pärnu Vallikäär) and the footpath which runs along the waterfront. Since the park being redesigned, modern accents have been added to the historical backdrop to create a unified and unique atmosphere. Also where light is concerned.

The atmospheric lighting on the pedestrian bridge and the 17th century Tallinn Gate ensure for those romantic moments in the evenings. Visitors who take a stroll across the bridge are expertly guided by our LEDLUX LH which is integrated into a slightly curved handrail. The blue version of the same lights is to be found on the underside of the bridge, artfully accentuating its structure and design. In the background, you will see the historically significant town gates with their exceptional stucco work, illuminated by instalight 4010.

The concept deftly combines three separate light lines with three different looks to create a perfectly coherent lighting effect throughout Pärnu.

A pioneer within the mining community

G DATA Software AG

Bochum, Germany

From Germany and for over 30 years, G DATA Software AG has provided security support to the digital world. As of 1987, the IT pioneer from Bochum had already developed an anti-virus program. The spectacular head office situated on an old industrial estate is in every detail, fully focused on its core competency: an intelligent networking structure. The ingenious lighting system in the reception area, cafeteria and event hall which was co-designed with InstaLighting, bears to this testimony.

The interior lighting within the three areas are there to reflect G DATA's leading role – and of course harmonise with the multi-functional interior. This task was solved by InstaLighting and the designated planning office by an open-designed and widely ramified grid of direct and indirect lighting where individual cells were interlinked with one another. The distinctive lighting in the foyer – a graceful and futuristic accentuated light comb form on the ceiling (LEDLUX RGBW) and radiant light beams on the floor (1060) function as a visual statement and also gives visitors at the same time a clear ground-breaking key feature. The cafeteria which speaks the same language, comes across as being cosy and at the same time, hovers like a spaceship. In the event hall, cubic exterior lighting can be separately dimmed and the colour temperature adjusted to provide for the necessary accent. The whole system works on the principle of Human Centric Lighting (HCL) and supports the natural human circadian rhythms. The control system allows for four scenarios: daylight, two dynamic party scenes as well as working light for cleaning and general service tasks.

Where people are the focus

Sartorius AG

Göttingen, Germany

REFERENCE

Realisation: 2017

Building owner: Sartorius AG

Light planner: Studio DL

Photo: Kaffee, Milch & Zucker

Sustainability, open minded, enjoyment: these are the central values which characterise the Sartorius AG, a leading international supplier of bio-processing and laboratory technology with over 8100 employees in over 60 locations worldwide. The Sartorius campus – the attractive company's headquarters located in Göttingen, Germany – superbly reflects the company's philosophy. It offers a modern and creative environment with lots of space and esteem. The sophisticated lighting system also revolves entirely around the human element.

The Insta team's task: where functional efficiency and aesthetic are brought together in cooperation with the aspects of Human Centric Light (HCL) where the person and his well-being particularly take centre stage. Specifically, for this project, our lighting experts installed a sleek customised instalight Flat, an extremely flat pendant luminaire, a highly efficient LED technology and a fully flushed radiating optic. This special pendant luminaire discreetly blends into the prestigious foyer and carefully designed open-plan offices of the Sartorius Campus. With its homogeneous direct and indirect lighting, this fits perfectly well with the surrounding lighting – and one more thing – its lighting colours adapt automatically according to the time of day or the human working cycle, thus supporting the natural biorhythm.

In constant use

Dietrich-Oppenber-Haus

Essen, Deutschland

Certainly, a real eye-catcher in Essen: The “Dietrich-Oppenber-Haus”. Correct. Independant. In touch with people: A motto which has accompanied the „Neue Ruhr Zeitung/ Neue Rhein Zeitung“ (NRZ) for a long time. Founded by Dietrich Oppenberg and first published in 1946, the NRZ – one of the largest regional newspapers in Germany – has not only printed stories but has written history and made history. With the stylish Dietrich-Oppenber-Haus in Essen, the local publishing group has certainly set an iconic memorial to their founder – including a façade illumination which certainly sets a benchmark.

For the exterior lighting of this remarkable building, Insta had in 2005 provided for LED rows in different lengths and colours as well as the appropriate lighting management system. The project took up operation as of 2006 and 10 years later on, there followed an update. Old plans, data files – everything had been archived, so that it was no problem to further maintain the older installations and to upgrade the then technology with new power supplies, control units and LEDs.

For this project, the entire 26 vertical metres of RGB were converted to RGBW along with new lighting scenes. For the remaining part of the facade’s illumination, single malfunctions were rectified with new light lines and new lengths were tailored to the former ones. The various colour channels of the new LEDs were installed on-site so as to visually match with the older LEDs and ensure for a fully integrated and harmonious illumination. This exceptional illumination certainly enhances the character of the “Dietrich-Oppenber-Haus” at night.

Facade lighting

instalight 3050 instalight 3065

Accentuating light as twin-pack.

Colour-dynamic illumination from a large distance or well-aimed accentuation on smallest space - the two cubic spots instalight 3050 and instalight 3065 master many kinds of accentuating light. With a high light output and a great number of control possibilities and light colours, instalight 3050 is the flagship of this spot family. In the same design, the compact instalight 3065 convinces with precisely directed light on smallest installation space.

Both spots are available with different optics, and thus can be adapted to the relevant lighting task optimally.

> instalight 3050

> instalight 3065

instalight 3050 single-colour
Cubic spot

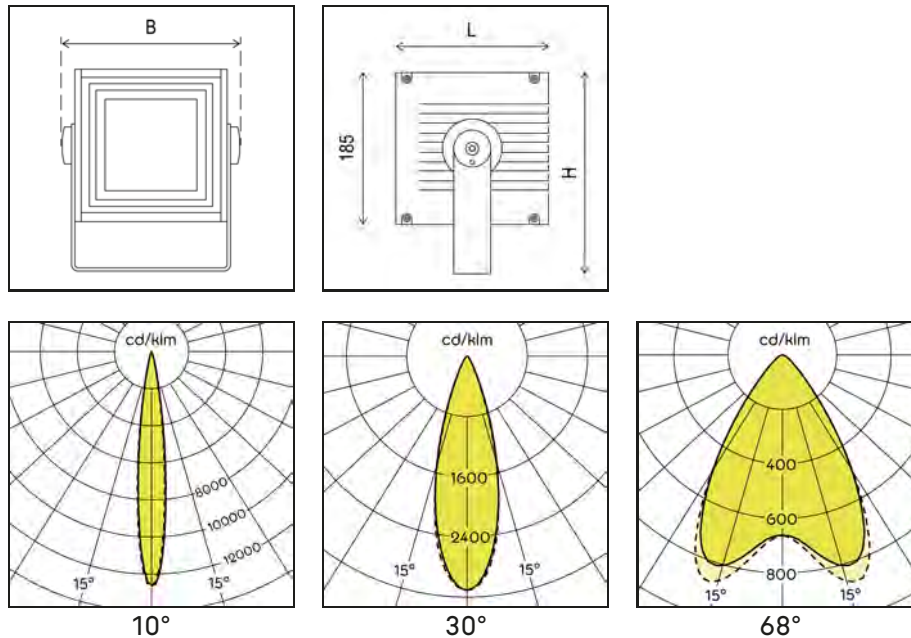

The high output spotlight is always the right choice when monochrome light with maximum light intensity is required. Through perfectly matched optics, it is ideally suited as a spotlight for accent light from a large distance or as a floodlight for the illumination of large building elements and sculptures.

Main Features

- > Minimum installation and planning effort due to direct access to main voltage
- > Positive locking cover disk prevents dirt adhesion
- > Mounting bracket can be removed for easy and comfortable assembly
- > Ready to connect with system plug for quick and reliable installation
- > Mounting bracket with graduation for fast and reproducible alignment

Cubic compact spot

The miniature spot, with its high light output, can primarily show its benefits in targeted accenting. Precisely directed white light, an integrated power supply module and the ultra-compact design turn this luminaire into the ideal lighting tool for delicate presentations on buildings, as well as in parks and gardens.

Main Features

- > Minimum installation and planning effort due to direct access to main voltage
- > Ideal for accent lighting by means of rotationally symmetrical or oval appearance
- > Positive locking cover disk prevents dirt adhesion
- > The variant with the light colour 4000 K is listed for use at the Deutsche Bahn AG
- > Mounting bracket can be removed for easy and comfortable assembly

Cubic compact spot

This mini spot with its high light output is the perfect luminaire for smart accentuation. The precisely directed white light with adjustable colour temperature is the ideal lighting tool to realise delicate dynamic light scenes on facades or in parks and gardens.

Main Features

- > Tunable White for the scenographic lighting
- > A unique control algorithm guarantees constant brightness over the entire adjustment range
- > Positive locking cover disk prevents dirt adhesion
- > Mounting bracket can be removed for easy and comfortable assembly
- > Ready to connect with system plug for quick and reliable installation
- > Mounting bracket with graduation for fast and reproducible alignment
- > Smart, small and robust
- > Two different optic variants (Narrow Spot or Bi-Symmetric)
- > External power supplies and control components on request

Facade lighting

instalight 1065

Façade illumination to perfection.

The new generation of the façade spot instalight 1065 convinces by a very high luminous efficiency, a great number of colour-dynamic control possibilities as well as optics especially adapted to facade illumination. The sturdy aluminium housing can be placed discreetly in many places and reliably protects the integrated LED and ballast technology against all weather conditions. Two luminaire lengths allow to react flexibly to different mounting situations and light current packages needed.

Linear facade spot

The linear spot with variable colour temperature supplies the highest light intensity in the smallest installation space. A range of perfectly matched optics and full DMX compatibility make this luminaire a lighting all-rounder for high quality facade lighting.

Main Features

- > Tunable white for biodynamic lighting and colour dynamic white light in high quality
- > Ideal for accent lighting by means of rotationally symmetrical or oval optics
- > Uncompromising use as wallwasher thanks to asymmetrical optics
- > External colour mixing
- > Positive locking cover disk prevents dirt adhesion
- > Mounting bracket can be removed for easy and comfortable assembly
- > Ready to connect with system plug for quick and reliable installation
- > Mounting bracket with graduation for fast and reproducible alignment

Cast in-ground light line

instalight 1060

Cast in-ground light line

The family of the instalight inground light lines in the filigree refined steel housing has a very special way of turning light into an element of architectural design. Choose from a range of different light colours and mechanical concepts to create the right light line for your project. The slender, elegant instalight 1060 is already lighting up countless paths and squares around the world.

System components

- 1 instalight 1060 inground light line
- 2 ACO slotted frame drainage
- 3 ACO channel body
- 4 ACO Sideline

The ACO Sideline is the result of a development cooperation with ACO Tiefbau. Realized was a slotted frame drainage with integrated LED illumination as linear inground light line. Ideally suitable for architectural illumination of squares, paths, parks and gardens. Monochrome colours, CI-colours, RGB with colour change or dynamic light. As standard, Sideline integrates the instalight 1060.

instalight 1060 light inserts for integration into ACO Sideline by the client

Product characteristics / Technical data

ACO Sideline combines two functions in one: Drainage and light. As standard, Sideline takes up the inground light line instalight 1060. In the variants LH, LN, LS, LX RGBW and LX TW. All product features and advantages of the inground light line instalight 1060 can be found on the product pages. ACO Sideline can be obtained from ACO Tiefbau Vertrieb GmbH.

Cast in-ground light line 230 V

The in-ground light line, made of V4A stainless steel, is more than a simple orientation light. Thanks to the direct connection to the mains voltage and compatibility with standard dimmers, this luminaire stands out through its minimal space requirements and small amount of installation work.

Main Features

- > Homogeneous light-emitting surface for aesthetic lighting effect
- > Minimally visible housing parts make the luminaire inconspicuous in daylight
- > Flush installation for perfect integration into the surroundings
- > Weatherproof and UV-resistant materials guarantee color stability for the entire service life
- > Extremely stable installation frame, can withstand wheeled vehicles
- > High quality look due to construction without screws in the visible area
- > Frameless housing ensures seamless transition to light-emitting surface
- > Minimum installation and planning effort due to direct access to mains voltage
- > V4A stainless-steel housing for durable operation in an external environment
- > Maintenance-free and safe from vandalism thanks to impact-resistant full grouting
- > Snap-In-technology of the light inserts for fast assembly without tools
- > Ready to connect with system plug for quick and reliable installation
- > IP69: According to ISO 20653 (standard including cleaning with high-pressure hot vapour cleaner)
- > IP69K: According to EN DIN 40050-9 (standard including cleaning with high-pressure hot vapour cleaner)
- > Project-related special lengths on request

Inground light point

instalight 3090

Encapsulated inground light point

instalight 3090 offers many design possibilities; whether monochrome white, coloured or controlled with RGB colour sequence. You can choose between the sturdy but elegant refined steel housing or the frameless version. instalight 3090 delineates, connects and helps to orientate or accentuate.

> instalight 3090

instalight 3090

Inground light point, encapsulated

The light point is the best example of a compact, monochrome orientation light of the kind which can only be implemented with modern LED technology. Highly robust and equipped with a homogeneous non-slip light surface, this floor installation light point becomes an impressive element of modern, urban lighting concepts.

Main Features

- > Minimally visible housing parts make the luminaire inconspicuous in daylight
- > Flush installation for perfect integration into the surroundings
- > Weatherproof and UV-resistant materials guarantee color stability for the entire service life
- > High quality look due to construction without screws in the visible area
- > Frameless housing ensures seamless transition to light-emitting surface
- > Maintenance-free and safe from vandalism thanks to impact-resistant full grouting
- > Ready to connect with system plug for quick and reliable installation
- > IP69: According to ISO 20653 (standard including cleaning with high-pressure hot vapour cleaner)
- > IP69K: According to EN DIN 40050-9 (standard including cleaning with high-pressure hot vapour cleaner)

Product Variations

instalight 4020

Light from handrail

The instalight 4020 is the continued further development of linear LED products for outdoor areas. Fully encapsulated - sturdy, waterproof, vandal-proof. Besides the classic mounting type for lighting out of the handrail, the module can also be used free in buildings.

> instalight 4020

instalight 4020 LH ASYM

Asymmetrical light insert encapsulated 230 V

The universal light insert, made of V4A stainless steel with an asymmetrical light distribution, allows highly-efficient illumination of traffic areas. The completely encapsulated LED light element can be integrated almost invisibly into handrail. The LH variant is directly connected to the mains voltage and compatible with standard dimmers.

Main Features

- > Asymmetrical beam characteristic for more consistency over a defined area
- > Minimally visible housing parts make the luminaire inconspicuous in daylight
- > Weatherproof and UV-resistant materials guarantee color stability for the entire service life
- > Minimum installation and planning effort due to direct access to main voltage
- > V4A stainless-steel housing for durable operation in an extreme environment
- > Maintenance-free and safe from vandalism thanks to impact-resistant full grouting
- > IP69: According to ISO 20653 (standard including cleaning with high-pressure hot vapour cleaner)
- > IP69K: According to EN DIN 40050-9 (standard including cleaning with high-pressure hot vapour cleaner)
- > Light inserts with the color temperature 4000 K are DB-listed
- > Project-related special lengths on request

Specifications

Optics	Clear
Beam angle direct	61° x 103°
Luminous efficiency	79 lm/W
Ambient temperature	-25 ... +45 °C
Width (B)	27 mm
Height (H)	30 mm
Dimmable/Controllable	Yes
Interface	depending on the ballast used
Housing colour	stainless steel
Rated voltage DC	28 V SELV
Input	7.2 W/m
Degree of protection	IP 67, IP69, IP69K

Efficiency class	A+
Protection class	III
Storage/transport temperature	-25 ... +60 °C
Service life (L80/B10)	(@ 25 °C) 60,000 h
Installation depth (ET)	30 mm
Fitting width (EB)	27 mm
Light outlet (LA)	L - 30 mm
Connection mode	Crimp connector
Housing material	Stainless steel
Cover material	PU grouting
Glow-wire testing	650 °C
Weight	1.6 kg/m
Impact strength	IK10

Asymmetrical light insert encapsulated

The universal light insert, made of V4A stainless steel with an asymmetrical light distribution, allows highly-efficient illumination of traffic areas. The completely encapsulated LED light element can be integrated almost invisibly into handrail.

Main Features

- > Asymmetrical beam characteristic for more consistency over a defined area
- > Minimally visible housing parts make the luminaire inconspicuous in daylight
- > Weatherproof and UV-resistant materials guarantee color stability for the entire service life
- > V4A stainless-steel housing for durable operation in an extreme environment
- > Maintenance-free and safe from vandalism thanks to impact-resistant full grouting
- > IP69: According to ISO 20653 (standard including cleaning with high-pressure hot vapour cleaner)
- > IP69K: According to EN DIN 40050-9 (standard including cleaning with high-pressure hot vapour cleaner)
- > Project-related special lengths on request

Light line system indoor/outdoor

instalight 4010

Facade illumination in perfection.

The delicate light line allows visually flawless contouring of facades and architectural lines. Reduced to a minimum of material the instalight 4010 in its slim refined steel profile with 3 different optics on request supports the architectural building character at night but, during daylight, recedes almost invisibly into the background. Controlled with instalight Vario or instalight Control, whether monochrom, Tuneable white, RGB or RGBW, instalight 4010 is the perfect linear system for the facade.

> instalight 4010

> instalight 4010 DB

instalight 4010

System diagram

instalight 4010 is a high-quality system of corrosion-resistant refined steel and UV-resistant acrylic covers with high-grade optical characteristics.

Mounting is possible in horizontal and vertical position whereat it reaches degree of protection IP64. All LED inserts out of the LEDLUX linear programme can be integrated mechanically without tools.

> instalight 4010

Product characteristics

LED PREMIUM TECHNOLOGIE
MADE IN GERMANY

Quality

- › Corrosion-resistant refined steel support rails and components
- › UV-resistant acrylic covers
- › acrylic covers with good optical characteristics (transmittance)

Cost savings

Economic operation

- › Longest possible service life for LED and profiled system
- › Minimal maintenance work for the system
- › Optimal control possibilities
- › Integration into all building installation systems
- › Low energy consumption
- › Short mounting time
- › Reduction of mounting costs by tool-less mounting of the acrylic cover and the LEDLUX light inserts

Luminous effect

- › Cover Micro Line, narrow light diffusion
- › Cover translucent, broad light diffusion
- › Cover clear

Variability

- › For use in horizontal and vertical construction
- › For front light output
- › Small section allows „inconspicuous“ mounting in existing openings

> Freedom in colour design and intensity: choose one of the light insert types out of the LEDLUX system

LEDLUX LH

- › To be connected to 230 V direct
- › To be equipped either with single-colour white LED or monochrome in the colours red, green, blue or yellow
- › Integrated power supply unit, protective isolation

LEDLUX LX TW

- › Tunable White Technology for precisely adjustable colour temperature
- › Dimmable

LEDLUX LN

- › Low-voltage luminaire for ambient lighting or lighting tasks with medium luminous intensity
- › To be equipped either with single-colour white LED or monochrome in the colours red, green, blue or yellow

LEDLUX LX RGB

- › Complete colour range in RGB
- › Mixed colours, Corporate Colour

LEDLUX LS

- › For lighting tasks with intensive and high-quality white light
- › Energy-efficient, maintenance-free and space-saving
- › Up to 84 lm/W

LEDLUX LX RGBW

- › Combination of RGB- and white light LED for highly saturated colours and brilliant white light
- › Separate control of RGB and share of white light

Fitting accuracy

- › The support rail compensating element can be shortened and fitted precisely at the place of mounting
- › The LED light inserts can be ordered in different lengths
- › The LED light inserts for the compensating element are fitted precisely by InstaLighting for the relevant project

**Securing against movement**

- › Retaining collar as protection against sliding of the acrylic cover in case of vertical mounting
- › Defined material expansion of the acrylic

Holding-down clamp for cable

- › Retains lateral cables in position
- › Enticement of up to 4 cables
Ölflex Robust 210.3 x 1 mm²
- › No slipping of the cables over the LED optics

**Cable gland**

- › Support rail connector with different functions
- › The enticement of up to 4 cables (for the supply of up to 4 LED light inserts) in the support rail is possible

Tool-less mounting

- › The LEDLUX light inserts can be snapped into pre-mounted profiled retaining clamps in the il 4010 profile
- › The acrylic cover is to be snapped into the V-groove of the support rails
- › Reduction of mounting time

e.g. with plug connector IP67

Easy to install

- › Mounting of the profiled system requires only minimal adjustment
- › Parts in the set, incl. screws, nuts, etc. Fastening tools for fastening on site is to be provided by the customer
- › Connection of the LED light inserts to the mains power supply plug-in system (only NV)
- › Cable ends also available with wire-end sleeves, Cable lengths in 1 m 2 m or 5 m. Project-related solutions on request

Through-wiring of LEDLUX light inserts

- › Reduction of the number of feed-in points by chaining of light inserts (3 or 2)
- › Dimensioning can be effected by InstaLighting

Functional safety

Project design / offer

InstaLighting offers help in project design and preparation of a quotation for your project.

Comfortable light and luminaire management

Single-sourced control. Fail-safe. For a good, trouble-free investment into the future.

Everything is possible. For small, single-room control solutions up to large control solutions including several rooms with bus systems like KNX. With commonly tuned devices and systems, controls and luminaires InstaLighting as daughter company of Insta, Gira and Jung provides for comfortable light management and thus offers the customer a sound investment into the future. In one customer project e.g. the following sensors and actuators for a comfortable control can be used:

- › Time controls
- › Wireless controls via RF
- › Integration of DMX, DALI, eNet, KNX
- › Sensor for Twilight, rain, wind, movement detection
- › From simple ON/OFF switches through to operation panels and mobile devices like smart phones, etc.

instalight 4010 LH

Light line system indoor/outdoor 230 V

The light line system serves as an ideal tool for effective building accentuation. Reduced to a minimum of material in mechanical terms, the LED light line supports the architectural building character but, when switched off, recedes almost invisibly into the background. In addition, the light insert stands out through a direct connection to the mains voltage and compatibility with standard dimmers.

Main Features

- > Modular component system guarantees maximum design flexibility and scalability in the object
- > Exchangeable acrylic covers for variable light effect
- > Minimally visible housing parts make the luminaire inconspicuous in daylight
- > Weatherproof and UV-resistant materials guarantee color stability for the entire service life
- > Revisable and upgradeable LED technology
- > Various light inserts ensure flexibility in the application
- > V2A stainless-steel housing for durable operation in an extreme environment
- > Light inserts with the color temperature 4000 K are DB-listed

instalight 4010 DB

System diagram

The delicate light line allows visually flawless contouring of facades and architectural lines. Mechanically reduced to a minimum of material, instalight 4010 DB in the slim refined steel profile with $\pm 5^\circ$ optics supports the architectural character of a building at night, recedes to the background nearly invisibly during daytime.

Dimmed with instalight Vario or instalight Control, instalight 4010 DB is the perfect linear system for the facade.

instalight 4010 DB is made of non-corrosive stainless steel and UV resistant acrylic covers and has high-grade optical characteristics. Mounting is possible in horizontal and vertical position whereat it reaches degree of protection IP66.

Product characteristics

LED PREMIUM TECHNOLOGIE

MADE IN GERMANY

Quality

- › Corrosion-resistant refined steel support rails and components
- › UV-resistant acrylic covers
- › acrylic covers with good optical characteristics (transmittance)

Cost savings

Economic operation

- › Longest possible service life for LED and priflated system
- › Minimal maintenance work for the system
- › Optimal control possibilities
- › Integration into all building installation systems
- › Low energy consumption
- › Short mounting time
- › Reduction of mounting costs by tool-less mounting of the acrylic cover and the LEDLUX light inserts

Luminous effect

- › Cover clear, $\pm 5^\circ$

Variability

- › For use in horizontal and vertical construction
- › Small section allows „inconspicuous“ mounting in existing openings

LEDLUX LS DB

- › For lighting tasks with intensive and high-quality white light
- › Energy-efficient, maintenance-free and space-saving
- › Up to 46 lm/W

Fitting accuracy

- › The support rail compensating element can be shortened and fitted precisely at the place of mounting
- › The LED light inserts can be ordered in different lengths
- › The LED light inserts for the compensating element are fitted precisely by InstaLighting for the relevant project

Securing against movement

- › Retaining collar as protection against sliding of the acrylic cover in case of vertical mounting
- › Defined material expansion of the acrylic
- › Securing rope connects support rail and optics

Holding-down clamp for cable

- › Retains lateral cables in position
- › Entrainment of up to 4 cables
- › Ölflex Robust 210, 3 x 1mm
- › No slipping of the cables over the LED optics

Cable gland

- › Support rail connector with different functions
- › The entrainment of up to 4 cables (for the supply of up to 4 LED light inserts) in the support rail is possible

Tool-less mounting

- › The LEDLUX light inserts can be snapped into pre-mounted profiled retaining clamps in the il 4010 profile
- › The acrylic cover is to be snapped into the V-groove of the support rails
- › Reduction of mounting time

Easy to install

- › Mounting of the profiled system requires only minimal adjustment
- › Parts in the set, incl. screws, nuts, etc. Fastening tools for fastening on site is to be provided by the customer
- › Cable ends also available with wire-end sleeves, Cable lengths in 1 m, 2 m or 5 m. Project-related solutions on request

Through-wiring of LEDLUX light inserts

- › Reduction of the number of feed-in points by chaining of light inserts (2) possible
- › Dimensioning can be effected by InstaLighting

Project design/offer

InstaLighting offers help in project design and preparation of a quotation for your project.

Functional safety

Comfortable light and luminaire management

Single-sourced control. Fail-safe. For a good, trouble-free investment into the future.

Everything is possible. For small, single-room control solutions up to large control solutions including several rooms with bus systems like KNX. With commonly tuned devices and systems, controls and luminaires InstaLighting as daughter company of Insta, Gira and Jung provides for comfortable light management and thus offers the customer a sound investment into the future. In one customer project e.g. the following sensors and actuators for a comfortable control can be used:

- › Time controls
- › Wireless controls via RF
- › Integration of DMX, DALI, eNet, KNX
- › Sensors for Twilight, rain, wind, movement detection
- › From simple ON/OFF switches through to modern operation panels and mobile devices like iPhone, etc.

instalight 4010 DB

VV-IL 4010 LS DB

Light line system indoor/outdoor DB listed

The light line system with narrow optics serves as an ideal tool for targeted building accentuation. Reduced to a minimum of material in mechanical terms, the LED light line supports the architectural building character but, when switched off, recedes almost invisibly into the background.

Main Features

- > Modular component system guarantees maximum design flexibility and scalability in the object
- > Minimally visible housing parts make the luminaire inconspicuous in daylight
- > Weatherproof and UV-resistant materials guarantee color stability for the entire service life
- > Revisable and upgradeable LED technology
- > V2A stainless-steel housing for durable operation in an extreme environment
- > Listed for use at the Deutsche Bahn AG
- > Narrow, symmetrical light distribution for targeted accent light

Light insert for indoor and outdoor use

LEDLUX

Maximum flexibility.

LEDLUX is a modular and flexible system allowing to combine different shapes and types of LED lighting in one object, e.g. linear and surface applications. LEDLUX offers highest flexibility and modularity. The vast modular system has the right answer for every luminous design task: flat and linear luminaire housings for outdoor and indoor applications, wide- and narrow-beam optics, brilliant white light, saturated colours, lighting suitable for cameras thanks to flicker-free dimming or controllable colour temperature with high Ra. From simple applications, like display illumination through to integration in complex building installations, e.g. in bus systems like KNX.

The system LEDLUX is constantly refined. We are pleased to advise you to find the suitable solution for your project.

> LEDLUX linear

> LEDLUX plane

Intelligently linked LEDLUX Control

For perfect integration into the architecture, intelligent control of the lighting is indispensable. The wide range of possibilities of the LED is only really exhausted in this way: well-measured changes in brightness via colour setting in the white range through to colour dynamics artistically staged in the whole RGB colour range.

In combination with instalight Vario the LEDLUX system offers these possibilities by intelligent links to all common control systems like KNX, DALI, DMX, LEDTRIX and 1-10V technology.

> More information about instalight Vario and instalight Control can be found in the chapter „Controls“

instalight Vario

instalight Vario is the optimal control system for small and medium-sized systems with manageable complexity. With instalight Vario, commissioning is very easy by means of an easily understandable and intuitively operable App. Tedious programming was yesterday – today is instalight Vario.

instalight Control

A pool of intelligently scaled hardware components makes instalight Control an effective control tool for complex lighting projects.

LEDLUX LED light inserts

LEDLUX linear

Linear, highly variable LED lighting system for indoor and outdoor applications, as ready-for-connection solution for invisible integration into various fields of architecture.

LEDLUX LX – RGB

Ready-for-connection LED surface system for indoor applications for flexible applications e.g. as wall or ceiling luminaire or for special-effect illumination. All LED modules of the LEDLUX plane system can be extended optically, electrically and mechanically in any form and number by means of the connector set.

linear and plane LEDLUX variants

LEDLUX LH

- › Dimmable with standard dimmers
- › To be connected to 230 V direct
- › Optionally equipped in the light colours 2700 K, 3000 K, 4000 K and blue. Other light colours on request
- › Integrated power supply unit, protective isolation

LEDLUX LN

- › Low-voltage luminaire for ambient lighting or lighting tasks with medium light intensity
- › Optionally equipped in the light colours 2700 K, 3000 K, 4000 K and blue. Other light colours on request

LEDLUX LS

- › For lighting tasks with intensive and high-quality white light
- › Energy-efficient, maintenance-free and space-saving
- › Up to 113 lm/W
- › Optionally equipped in the light colours 2700 K, 3000 K, 4000 K and blue. Other light colours on request.

LEDLUX LX TW

- › Tunable White Technology for precisely adjustable colour temperature in a range from 2700 K to 6500 K
- › Dimmable, optionally controllable with analogue LED control

LEDLUX LX RGB

- › Complete colour range in RGB
- › Mixed colours, Corporate Colour

LEDLUX LX RGBW

- › Combination of RGB- and white light LED for highly saturated colours and brilliant white light
- › Separate control of RGB and share of white light

LEDLUX LH

The integrated ballast technology makes LEDLUX LH an inexpensive alternative when it comes to large-scale projects. By direct connection to 230 V external power supply units are made redundant and thus the installation is straightforward and costs are kept at a minimum.

LEDLUX LN

A maximum luminous flux is not always required. Optimised especially for the demands of orientation and ambience lighting, LEDLUX LN wins over with a balanced system capacity, medium luminous flux and numerous light colours from which to choose from.

LEDLUX LS

The LS variant stands out with its high luminous flux, efficiency and a good colour rendition. With its high luminous flux, LEDLUX LS is also very well suited for general lighting. Energy-efficient, maintenance-free and space-saving.

LEDLUX LX – TW (Tunable White)

When looking for the right white, when rooms and moods are expected to go through transitions, then the adjustment of light colours is a prerequisite – from a comforting warm white over neutral white to an inspiring daylight white - InstaLighting enables a professional and ergonomic use of Tunable White. The high quality demands when selecting the LED units and the InstaLighting Tunable White Control, designed for this purpose, have but one purpose: the precise (and from each other independent) variations and reproduction of light colour and light intensity. Whether as static light scenes with smooth transitions or the use of individual lighting sequences geared to the users needs, InstaLighting LEDLUX LX provides the perfect light. Easy and reliable.

LEDLUX LX – RGB

Giving architecture an atmosphere can be created rapidly and flexibly through dynamic colourful accent lighting. Any colours of the RGB colour range can be displayed easily. From simple colour changes through to multimedia applications.

LEDLUX LX – RGBW

Is first step when it comes to all lighting situations where saturated colours and “pure” white light are required.

Apart from displaying all colours of the RGB colour range, white light can be precisely proportioned or the high-quality white can be adjusted.

LEDLUX LED light inserts

LEDLUX – at a glance

LEDLUX LH

To be connected to 230 V direct and dimmable with standard dimmers. No external power supply units are needed. This saves mounting time and space. Ideally suitable for outdoor applications. Firm light colours: 2700 K, 3000 K, 4000 K and blue.

LEDLUX LN

Ideally suitable for white general lighting and accentuating lighting with single-coloured light. Available in 2700 K, 3000 K, 4000 K and blue.

LEDLUX LS

Whenever much light is needed, the highly luminous LEDLUX LS comes into play. It solves manifold tasks of general lighting with brilliant white light in the light colours 3000 K to 6500 K.

Advantages

- › Long service life, nearly maintenance free and suitable for places where access is difficult
- › Particularly efficient, since no service work or lamp exchange is required
- › High degree of efficiency and thus low energy consumption
- › Low heat generation
- › No UV or infrared radiation
- › Various light colours available (depending on the variant RGB, RGBW, Tunable White, white light)
- › Mechanical strength
- › Compact illumination in smallest space due to miniaturised shape
- › Dimmable/controllable with suitable ballasts (depending on the variant)

LEDLUX LX - Tunable White

Two functions in one. The white light can be varied e.g. between 2700K and 6500 K. In addition, the brightness can be dimmed from 0-100% (dimming function). Ideal for ceilings, e.g. in museums.

LEDLUX LX - RGB

For this application colour, colour sequence, colour mixtures, e.g. a Corporate Colour is desired. Controllable, programmable with colour dynamics. Ideally suitable for orientation and accentuating lighting. Light to impress you.

LEDLUX LX - RGBW

The RGBW variant has got an RGB chip and a separate LED for white light. So in addition to highly saturated RGB colours also pastel colours can be displayed. The four-channel control makes it furthermore possible to use the white LED for lighting purposes.

Applications

- › Illumination of furniture and automobiles
- › Illumination of heat or UV-sensitive objects like e.g. textiles or food
- › Illumination of signs, exhibits, advertising surfaces, displays and show-cases
- › Highlighting of information, orientation systems or emergency lighting
- › Illumination and accentuation of building facades, staircases, paths (e.g. in handrails), showrooms or large luminous advertising systems
- › Special-effect illumination of displays, shop windows or at the point of sale

How do I order LEDLUX linear? With this order code you can configure and order the LEDLUX linear variant you need for your individual project. To this effect, choose from the 11 modular components of the LEDLUX order code which are relevant for your project, and thus you can generate your specific order code for your LEDLUX linear module.

Here choose the colour of the end cap, for example:	Here choose the input cable, for example:	Here choose the colour of the end cap, for example:	Here choose the output cable, for example:	Here choose the coding, for example:	Here choose the LED control, for example:
W	K102	W	K102	A	L
▼	▼	▼	▼	▼	▼
Colour of the end cap	Input cable	Colour of the end cap	Output cable	Encoding	LED control
Input (=housing colour)	Type of connection	Output (=housing colour)	Configuration see „input cable“	X no encoding (only LX / LS / LH)	R linear (special demands on flicker-free operation)
W white end cap	F Flat cable (only LX / LN / LS, only IP20)	W white end cap	additionally: XXXX = no output cable	A A-A...A (only LX, colour control per complete line)	W SBAM (Standard)
S black end cap	M Molex plug connector (only LX / LN / LS, only IP20)	S black end cap		B B-B...B (only LX, colour control per segment)	X Special requirement
	C Wire end sleeves (LX / LN / LS / LH, only IP64)			C A-A...B (only LX, colour control per light insert)	
	C Rubber plug connector (only LX / LN / LS, only IP64)			D Special encoding (only LX, customer- specific control)	
	Length				
	750 75 mm (only LX / LN / LS, only connection type M / F)				
	301 300 mm (only LX / LN / LS, only connection type M / F)

LEDLUX LH linear Light insert 230 V

The linear light insert supplies high-quality, medium-intensity white light and can be integrated into the architecture in a modular fashion. In so doing, the light element stands out through its even light distribution and high light quality. In addition, this light insert stands out through a direct connection to the mains voltage and compatibility with standard dimmers.

Main Features

- > Modular component system guarantees maximum design flexibility and scalability in the object
- > More than 250,000 product variants provide the right light for every idea
- > Minimum installation and planning effort due to direct access to main voltage
- > Weatherproof housing for use outdoors
- > Various abstract characteristics make focused illumination possible
- > Light inserts with the color temperature 4000 K are DB-listed

LEDLUX LX TW linear**Light insert**

The linear light insert stands out through its intense, dynamic white light and can be integrated into the architecture in a modular fashion. In so doing, the light element stands out through a variable colour temperature, even light distribution and high light quality.

Main Features

- > Modular component system guarantees maximum design flexibility and scalability in the object
- > More than 250,000 product variants provide the right light for every idea
- > Tunable white for biodynamic lighting and colour dynamic white light in high quality
- > A unique control algorithm guarantees constant brightness over the entire adjustment range
- > Lighting suitable for cameras thanks to flicker-free dimming
- > Weatherproof housing for use outdoors
- > Various abstract characteristics make focused illumination possible

	830X 3000 K (LS / LN)		B Control 12 - channel (only LX, controllable in four partial segments)
	840X 4000 K (LS / LN)		C Control via micro-switch can be chosen (only LX)
	2765 2700...6500 K, Tunable White (LX)		D Special encoding (only LX, 3 - channel for instalight Control)

How do I order LEDLUX plane? With this order code you can configure and order the LEDLUX plane variant you need for your individual project. To this effect, choose from the four modular components of the LEDLUX order code which are relevant for your project, and thus you can generate your specific order code for your LEDLUX plane module.

> Example:

LL — LX — 2765 — PQ200 — A

LEDLUX LS plane Light insert

The flat light insert supplies intense white light and can be integrated into the architecture in a modular fashion. In so doing, the light element stands out through a flat construction height and high light quality.

Main Features

- > Modular component system guarantees maximum design flexibility and scalability in the object
- > Background illumination of surfaces thanks to small mounting dimensions
- > Dimmable via PWM

LEDLUX LX TW plane Light insert

The flat light insert stands out through its intense, dynamic white light and can be integrated into the architecture in a modular fashion. In so doing, the light element stands out through its variable colour temperature, flat construction height and high light quality.

Main Features

- > Modular component system guarantees maximum design flexibility and scalability in the object
- > Tunable white for biodynamic lighting and colour dynamic white light in high quality
- > A unique control algorithm guarantees constant brightness over the entire adjustment range
- > Lighting suitable for cameras thanks to flicker-free dimming
- > Background illumination of surfaces thanks to small mounting dimensions

Product Variations

Luminaires for interior rooms

instalight 4033 NoLimit

Inspire. Create. Perform

NoLimit is an innovative linear LED system, which allows architects, planners and building owners to take control of implementing their own lighting designs. The luminaires offers a vast array of options to spark ideas and captivate your imagination. Anything can inspire you.

NoLimit has everything you need to realise ambitious lighting solutions. The basic modules of the kit offer almost limitless combination options.

With NoLimit, the planner is free to implement his ideas, bringing individual works to life – inspiration thus becomes creation.

> Light insert
High Power optics

The modular principle

Simple & modular

The profiles

NoLimit consists of six profiles in which you can realise all kinds of lighting tasks. Large profiles offer three locking positions, small profiles two. The entire line system has a uniform appearance and anyone planning with NoLimit can achieve a consistent design within the structure.

1. Light cove around a corner
2. Ceiling recess profile, frameless
3. Ceiling recess profile with frame

4. Surface mount profile, large
5. Surface mount profile, small
6. Pendant profile

The operating unit

Due to NoLimit's vast portfolio, the suitable electrical power supply has to be chosen: Voltage-controlled for applications in the low power range and current-controlled for mid and high power.

The operating devices can be installed within the profiles or mounted externally.

The basis of NoLimit is a modular kit, which is made up of clearly defined components: profiles, light inserts and operating devices. All parts are designed to work together and are conceived for simple configuration. NoLimit is an open system which grows and which continually adapts to new requirements.

The individuality

Optional accessories, such as decorative clasps for pendant suspensions, make each NoLimit installation one of a kind.

The accessories

The accessories complement NoLimit's lighting performance. The range includes all profile covers, as well as all the necessary contact elements for Low Power (3-pole), Mid Power Linear (4-pole) and High Power (4-pole). It also includes simple plug-in extension cables of various lengths as well as a short-circuit connector for the current-controlled Mid Power Linear and High Power modules.

The light inserts

Five different light inserts offer the highest possible flexibility. Equipped with lens-, reflector- or diffuser optics, these provide the right light distribution for every requirement. The large selection of beam angles and a body that can be either fixed or swivelled and rotated enable efficient general lighting as well

as precise accentuation. All lighting inserts provide white light of high quality and optionally adjustable colour temperature. The diffuser version can also be controlled dynamically in terms of coloured light and is therefore ideal for orientation lighting and creative illumination concepts.

TW

The profiles

Precise & compact

The profiles are available in two powder coatings as standard: black (RAL 9011 silk matt) and white (RAL 9016 silk matt). Six different profile geometries are available for installation, surface mounting, recessed or pendant, offering you maximum flexibility. On request also permitted beyond the standard lengths of 2.3m, NoLimit can be made to measure for a seamless finish. Light inserts and operating units are integrated into the profiles without need of tools using a standardised fastening system. This “snap-in” method ensures flexibility including the opportunity for subsequent modifications later on should they be needed.

Slender aesthetics & varied combination options

Create an interaction between housings and surfaces which you can either use to contrast or complement your surroundings. The consistent black and white line routing offers you huge potential possibilities in which to transform your space. The modular kit system means that all elements can be combined, whether recessed or raised. Here you can see how different lighting inserts can be simply brought together to create your perfect lighting.

Profile in RAL 9016 combination with the High Power Optics and High Power Linear light inserts

Profile in RAL 9016 in combination with the High Power Optics light insert and a profile cover in RAL 9011

Profile in RAL 9011 in combination with the High Power Linear and High Power Optics light inserts in RAL 9011

Excellent High Power Reflector light insert in combination with High Power Linear light insert

Recessed High Power Reflector light insert in frameless ceiling installation profile

High Power Reflector light insert as pendant luminaire in combination with High Power Linear light inserts for indirect ceiling lighting

Slender & efficient

With a width of only about 4 cm and a standard length of 2.30 m, these profiles set completely new standards in dimensioning lightline systems. They allow for a precise and seamless feed along walls and ceilings.

Variable lighting effects

Adjustable lighting levels within the profiles adds another feature to the design. The light inserts are fitted within the profiles, and can there be locked into either a flush-mounted, recessed or protruded position.

Gap-free line routing

Light inserts in three locking positions: protruding, ceiling-flush, recessed

The profiles

Light cove around a corner

For perfect transitions.

Offers three locking stages: recessed, flush, protruding.

instalight NoLimit 4033 high power spot single

Rotatable and swivelling light insert

The spotlight modules, which are available in three power classes, can be infinitely rotated and swivelled as well as freely positioned in all profiles of the instalight NoLimit system. With up to six light outlets, high luminance levels can be achieved in accent lighting. The precision optics create a high quality of light.

Main Features

- > Spotlight, which can be infinitely rotated and swivelled to all sides
- > Ideal for lighting situations that require frequent adaptations
- > Homogeneous light mixture within one single optic with Tunable White
- > Precise light projection for all light colours
- > Free placement and positioning inside of the NoLimit system profile
- > Three different optics (spot, medium and oval), three different light colours as well as a Tunable White version provide a very wide range of design possibilities.
- > The engagement position, which can be selected in three stages for all modules, allows further adaptation to the ceiling level and the chosen lighting strategy

instalight NoLimit 4033 high power spot triple

Rotatable and swivelling light insert

The spotlight modules, which are available in three power classes, can be infinitely rotated and swivelled as well as freely positioned in all profiles of the instalight NoLimit system. With up to six light outlets, high luminance levels can be achieved in accent lighting. The precision optics create a high quality of light.

Main Features

- > Spotlight, which can be infinitely rotated and swivelled to all sides
- > Ideal for lighting situations that require frequent adaptations
- > Homogeneous light mixture within one single optic with Tunable White
- > Precise light projection for all light colours
- > Free placement and positioning inside of the NoLimit system profile
- > Three different optics (spot, medium and oval), three different light colours as well as a Tunable White version provide a very wide range of design possibilities
- > The engagement position, which can be selected in three stages for all modules, allows further adaptation to the ceiling level and the chosen lighting strategy

instalight NoLimit 4033 High Power Accent light insert

Miniature light insert

The High Power Accent modules are perfectly suited for highlights and accents. With High Power Accent, the exact volume of light can be controlled by adjusting the number of modules employed. Each module is also adjustable, so that any alignment can also be precisely made.

Main Features

- > Light unit can be rotated variably to all sides and is easy to align exactly
- > Highest flexibility in design of planning to realisation
- > Tunable White (2700 K - 5000 K), free of artefacts and perfectly mixed from one optic

instalight NoLimit 4033 High Power Optics light insert
Light insert optics

The High Power Optics light inserts are ideally suited to complex applications within the field of general and accent lighting. The precision optics provide for an exact light focus and homogeneous illumination with excellent glare suppression at the same time.

Main Features

- > Four different radiation angles: narrow spot, medium, flood and wide oval Selection
- > of fixed colour temperature, of 2700 K to 4000 K
- > Tunable White (2700 K -5000), free of artefacts and perfectly mixed from one optic

Specifications

Degree of protection	IP20
Protection class	III
Optics	Clear
Ambient temperature	5°C ... 45°C
Length (L)	246 mm
Width (B)	41 mm

Height (H)	48 mm
Connection mode	Plug connector
Dimmable/Controllable	Yes
Interface	depending on the driver
Weight	0.32 kg
Nominal current	900 mA
Service life (L80/B10)	60,000 h (at 25°C)

instalight NoLimit 4033 High Power Reflector light insert
Light insert reflector

The High Power Reflector light inserts are predestined for efficient, standardised and balanced general lighting of large areas. Through targeted steering and internal reflection, the luminaire appears as an even light strip, without any detectable light outlet.

Main Features

- > Radiation angle of $45^\circ \times 60^\circ$ for optimal glare suppression
- > Classic reflector technology in combination with latest LED generation
- > Tunable White (2700 K -5000 K), free of artefacts and perfectly mixed from one optic

Light insert High Power Linear

IL 4033 HL 840X A90 1440

Light insert

The High Power Linear light insert ensures efficient lighting with low energy consumption. The optics are optimised for illuminating surfaces from large mounting heights. Installed in the NoLimit profile, the light insert also allows mounting point distances of up to 6 metres.

Main Features

- > Very high luminous efficacy with up to 160 lm/W
- > Compatible with all profiles of the NoLimit family
- > Longitudinal glare suppression possible through additional grid

instalight NoLimit 4033 Mid Power Linear light insert
Satined light insert

The Mid Power Linear light inserts meet the highest requirements for quality-conscious general lighting. Optionally equipped with Tunable White technology, the diffusely radiating linear modules are ideal for realizing HCL concepts.

Main Features

- > Homogeneous, uniform and linear accent and general lighting
- > No visible light-dark spots on the light-emitting surface
- > Tunable White (2700-5000 K), free of artefacts and perfectly mixed from one optic
- > Are supplied up to a length of approximately 2.30 m

instalight NoLimit 4033 Low Power Linear light insert

Satined light insert RGBW

The diffusely radiating Low Power Linear light inserts allow a consistent, self-contained design. Equipped with RGBW LED technology and a DMX-compatible interface, they turn the NoLimit system into a creative lighting tool, for example for light guidance systems in buildings or as effective mood lighting.

Main Features

- > Effective mood lighting or light guidance systems in buildings
- > Homogeneous and uniformly illuminated light line in all mixed colours (RGBW)
- > Individually controllable segments in video quality with a resolution of 8 cm
- > Are supplied up to a length of approximately 2.30 m

Luminaires for interior rooms

Downlights

Attractive highlights for every ceiling.

Downlights are small multi-talents: fitted out with a modern and energy-saving LED technology and in many case swivellable reflectors, they can create glamorous moments – either as selected accentuated lighting or for a homogeneous illumination of decorations. Furthermore, being able to adapt to a natural light cycle you ensure for a better sense of well-being and lengthen the proven time which customers stay in shops. Our wide-beam variations are ideal for an even and a wide-area spatial illumination – even fulfilling important tasks in production halls. Particularly in areas where no windows are present, they can considerably increase efficiency and motivation. Whether rotatable or invisible – Downlights are always a highlight.

Downlight

The downlight is a powerful day/night luminaire for shopping malls or similar use cases such as airports or production plants. The daylight ambience is realized with a double luminous flux. The simulation of natural daylight through tunable white leads to an improved well being inside of the building and hence to longer shopping time. Or to an increased motivation and productivity of the production team.

Main Features

- > High efficiency
- > Different light colours
- > Tunable White
- > Revisable and upgradeable LED technology
- > Extremely flat mounting
- > Easy installation without specific tools
- > Suitable for refitting and restoration

instalight 3015 Downlight

This power downlight is a well-known daylight/nightlight and is often used in shopping areas. The daytime environment is created by the double luminous flux. The adaptation of the natural light rhythm ensures greater well-being and prolongs the time spent in the shop. Other areas of application include industrial and production hall lighting. The Tunable White colour temperature control system can be used in windowless production areas to increase motivation and support employee health.

Main Features

instalight 3016 Downlight

This suspended luminaire with a luminous flux of over 10,000 lm is used to illuminate production halls, festival rooms or churches. Different light colours provide an atmosphere which perfectly underlines the special features of the environment. A good choice in windowless production areas is the Tunable White variant. It enhances the well-being of the staff and has a motivating effect. Irrespective of the intended use or light colour, the suspended luminaire is highly efficient.

Main Features

- > High efficiency
- > Different light colours
- > Tunable White
- > Revisable and upgradeable LED technology
- > Luminaire screen adjustable in fixed steps
- > Integrated power-supply unit

Luminaires for interior rooms

instalight Tec

Elegant design for effective moments.

Whether in grand interiors, reception halls or spacious working spaces: The lighting belonging to the instalight Tec family certainly cuts a good figure. It effectively and perfectly unites accentuated lighting with puristic design.

A characteristic of the instalight Tec is its innovative multichip faceted prism made up of fresnel lenses which run horizontally and vertically to optimally bundle the light. This advantage allows for a glare-free and at the same time for a highly precise lighting scenario.

In combination with its graceful and delicate aluminium body, this interior light displays a noble design which discreetly fits into every architectural spatial situation. A modular system configuration with instalight Tec is equally possible as with a mixture of any other variation.

mounted luminaires.

instalight Tec 1130

Linear pendulum luminaire, direct/indirect

The classic standard luminaire for the office combines puristic product design with an ultra-slim look.

Main Features

- > Perfect form for a harmonious design concept in the object
- > Puristic, minimalist product design in linear housing
- > Consistent design of the type series ensures a uniform appearance in the object
- > The slim, precisely shaped luminaire presents itself discreetly and refined
- > Low installation height ensures filigree appearance
- > Revisable and upgradeable LED technology
- > Separate dimmable direct and indirect light for variable lighting presets for comfort
- > Homogeneous beam thanks to multichip facet prism
- > Operation on safety lighting systems saves additional lamps
- > Installation-friendly thanks to adjustable distance between the suspension cables without the need for tools

Luminaires for interior rooms

instalight Flat

Minimalism at its best.
Multiple deployability.

Whether in historic building or in buildings with clearly defined modern lines: The instalight Flat enriches every room, no matter what. With its unique appearance and highly efficient LED technology, this interior lighting really comes to the forefront when it comes to prestigious foyers, hallways and conference rooms.

An extremely thin body encased in anodised aluminium to the highest quality, surrounded in a light contour with its clearly defined design in combination with a fully flushed radiating optic: The instalight Flat unites aesthetics to the maximum with an optimal homogeneous lighting, no matter in what variant.

Discover the diversity in shapes and sizes which the instalight Flat has to offer – an illuminating highlight which can be easily adapted to cope with any spatial demand.

Cover material	Plastic
Glow-wire testing	650 °C
Impact strength	IK06

instalight Flat 2042 P

Square pendulum luminaire

The universal pendant luminaire combines an extremely slim product design with a full light-radiating appearance and is suitable for a wide variety of lighting tasks in architecture.

Main Features

- > Perfect form for a harmonious design concept in the object
- > Flat, cubist product design
- > Consistent design of the type series ensures a uniform appearance in the object
- > No shadow flicker thanks to extensive light emission
- > Homogeneous light-emitting surface for aesthetic lighting effect
- > Flat luminaire design with narrow, peripheral light edge – plenty of light, few luminaires
- > With satin look suitable for prestigious rooms such as reception areas and foyers
- > Operation on safety lighting systems saves additional lamps

Product Variations

	Max. lumin. flux	Light colour	Luminance
il 2042 P02 830 600 DA 00	3280 lm	3000 K	3207 cd/m ²
il 2042 P02 840 600 DA 00	3560 lm	4000 K	3481 cd/m ²

Specifications

Power consumption	37 W
Degree of protection	IP20
Efficiency class	A+
Protection class	I
Optics	Satined
Beam angle direct	110°
Ambient temperature	+5 ... +35 °C
Length (L)	588 mm
Width (B)	588 mm
Height (H)	54 mm
Connection mode	Screwless terminal
Cable length	2000 mm
Dimmable/Controllable	Yes

Interface	1 x DALI
Housing colour	Silver anodized
Weight	12.1 kg
Rated voltage AC	220 ... 240 V ~
Rated voltage DC	198 ... 278 V
Mains frequency	50 / 60 Hz
Power factor 230V	0.95
Storage/transport temperature	-20 ... +70 °C
Service life (L80/B10)	60,000 h
Height of visible surface	25 mm
Housing material	Aluminium
Cover material	Plastic
Glow-wire testing	650 °C
Impact strength	IK06

Lighting control for inside and outside

instalight Vario instalight Control

Ingeniously simple.
Simply ingenious.

Lighting for any occasion, any mood or at any time of the day: What was previously impossible has now become common practice. Whether you are dimming, adjusting the brightness or colour of the light and its colour temperature or integrating within a Smart-Home-System: LED-technology has opened up innumerable possibilities

Today, whoever wishes to fully utilise the unique benefits which the LED offers, can now rely upon an intelligent integrated lighting control system which provides flexibility and is easy to operate – at home or en route, whether by smartphone, tablet or touch panel.

instalight Vario & instalight Control

Comparison of systems

The demands on control systems are extremely diverse. In order to realise the suitable concept for each project, Insta offers two perfectly tuned systems - for maximum scalability, most diverse complexity and highest efficiency in realisation.

	Operation / communication				Output / field bus			
Operation	KNX	App	Push-button inputs	Remote / monitoring	DMX	LEDTRIX	DALI	PWM
easy applications & small systems > instalight Vario 	via push-button module	via iPhone and Apple Watch	via binary communication module	–	1 x 512 channels (1 universe)	2 x 60 channels	DALI modules DT6 (2x) DT8 (2x)	PWM module
Operation	KNX	App	Push-button inputs	Remote / monitoring	DMX	LEDTRIX	DALI	PWM
complex applications & large systems > instalight Control 	via KNX/NetIP	via iPhone and Apple Watch	via KNX	via LAN/WLAN	up to 1000 masters with 2 x 512 channels each and RDM support	up to 1000 masters with 8 x 60 channels each	via Gateways	via Gateways

instalight Vario – modular and simple

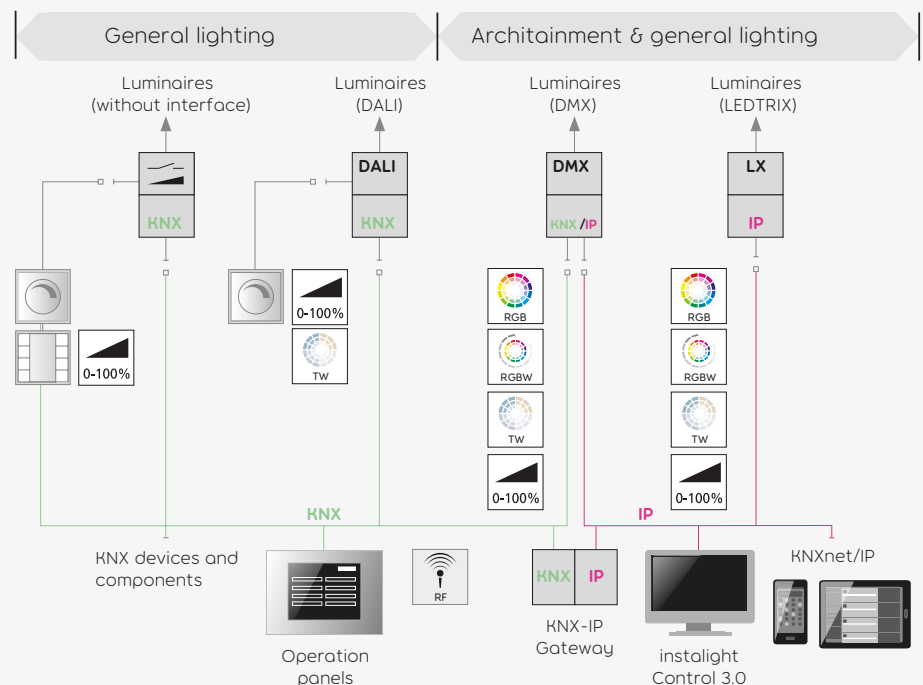

With the system instalight Vario you get an ingeniously simple modular system for very easy realisation „Out-Of-The-Box“. Never has the construction and commissioning of a perfect system been so easy - just a few steps needed. You choose the required modules, plug everything together, make the contacts and take the system into operation by a few clicks via the intuitive App:

1. Choose the colour mode, e.g. Tunable White, RGB, RGBW.
2. Choose a pool of pre-assembled operation profiles
3. Choose the desired light scenes. Various static and dynamic light scenes are available. With instalight Vario no tedious programming of light scenes is needed! Ready!

instalight Control – maximum flexibility for highest requirements

Does your lighting management require a high degree of flexibility, scalability and integration into building automation? Then instalight Control is the right way for you. At the heart of the system are DMX and LEDTRIX Master. Connected via IP to form a large data network, you can combine many thousands of control channels into one large system. The instalight Control 3.0 commissioning software offers design options for creative lighting scene programming and the combination of logical functions. The connection to KNX opens the way to building automation with all the options available on the market. Human Centric Lighting can be experienced. A smooth transition is created between general lighting and architainment in a single system.

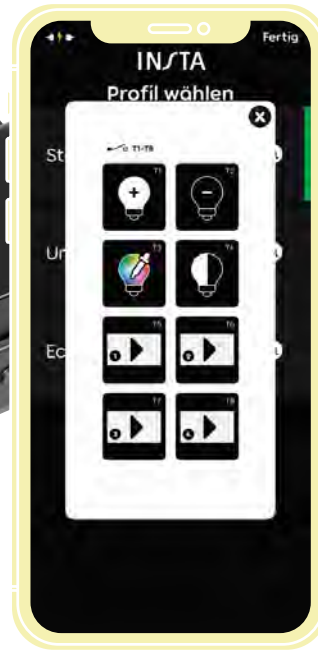

Light control. Wonderfully simple. **The Vario App**

Become a lighting designer. Create atmospheric coloured light or let your lighting automatically follow the natural course of the sun. Choose from a range of professionally pre-programmed light sequences or get creative and design your own: with the Vario app and the "instalight Vario" basic device, impressive lighting creation then becomes child's play.

 Download on the
App Store

instalight Vario basic device

instalight Vario App

306|307

Vario Setup app

Intuitive commissioning app for the modular lighting control device "instalight Vario".

Program a complete lighting installation in just three steps to make it easy for your customer to operate it via the Vario app and using optional connected push-buttons.

Main features:

- > Control of indoor and outdoor lighting
- > Control of coloured light with RGB or RGBW
- > White light with controllable colour temperature (Tunable White TW)
- > Dynamic light variations in video quality with up to 40 changes per second
- > Storage of up to four user-defined light colours
- > Human Centric Lighting thanks to time-accurate sunlight simulation
- > Combination profiles for separate control of ambient and usable light
- > Automatic operation using weekly timer
- > Control interfaces: DALI, PWM, DMX, LEDTRIX

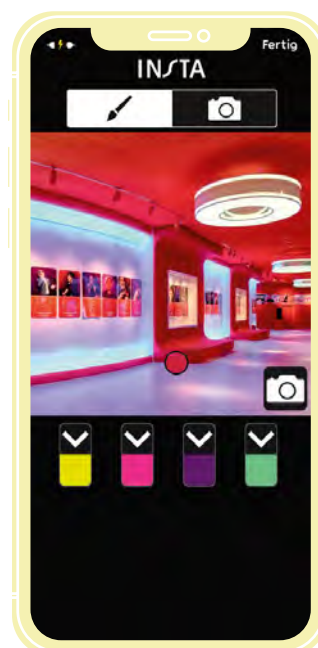

Vario app

Adjust your lighting to match your mood or the time of day. With instalight Vario, you can save up to four individual dynamic light colours. In addition, coloured light control in RGB, RGBW and Tunable White (TW) is possible.

The moved light sequences always set the right atmosphere.

Intuitive App for the selection and configuration of light scenes

Colour selection via colour picker or front camera on iPhone

Weekly timer with individual switch-on/off times

instalight Vario

instalight Vario app

- > User app for Apple iPhone
- > Control of indoor and outdoor lighting
- > Control of coloured light with RGB or RGBW
- > White light with controllable colour temperature (Tunable White TW)
- > Dynamic light variations in video quality with up to 40 changes per second
- > Intuitive colour selection via colour picker or front camera on iPhone
- > Storage of up to four user-defined light colours
- > Operation via iPhone and Apple Watch

instalight Vario Setup app

- > Commissioning app for Apple iPhone
- > The easiest way to commission instalight Vario systems is via iPhone
- > Selection of ready-made operation profiles
- > Selection and allocation of ready-made light scenes (dynamic and static)
- > High projection reliability

instalight Vario basic device

- > Universal device for controlling LED applications via smartphone or push-button
- > Easy operation via the free instalight Vario app
- > Configured in 3 steps by using the free instalight Vario Setup app
- > Connection to several smartphones possible
- > Integration into the existing LAN network or directly via WLAN
- > Separate control of DMX and DALI luminaires or PWM driven LEDs using only one device
- > Control of LED systems with automatically addressing LEDTRIX interface
- > Simple to expand thanks to plug-in communication and interface modules
- > Supply via external power supply unit (accessory with micro USB plug) or USB (max. 500 mA)

Universal control system, App operable

instalight Vario is the optimal control system for small and medium-sized systems with manageable complexity. With instalight Vario, commissioning is very easy by means of an easily understandable and intuitively operable App. Tedious programming was yesterday – today is instalight Vario.

Main Features

- > Universal device for control of LED applications via smartphone or push-button
- > Easy operation via the cost-free App "Vario"
- > Configured in 3 steps by using the cost-free App "Vario Setup"
- > Connection to several smartphones possible
- > Separate control of DMX and DALI luminaires or PWM driven LEDs by using only one device
- > Control of LED systems with automatically addressing LEDTRIX interface
- > Simply expandable thanks to plug-in communication- and interface modules
- > Supply via external power supply unit (accessory with micro USB plug) or USB (max. 500 mA)

Specifications

Memory card	Micro-SD card 4 GB
Length	200 mm
Height	134.5 mm
Width	52 mm
Rated voltage	DC 5 V via external power supply unit or USB (max. 500 mA)
Power consumption	1.7 W

Degree of protection	IP20
Protection class	III (SELV)
Ambient temperature	+5°...35°C
Design	Plastic housing with terminal compartment
Housing colour	Black
Display element	1 x status LED (covered in the terminal compartment)

Software and Accessories

instalight Control

instalight Control 3.0 is the free and comfortable PC desktop for the commissioning and programming of an instalight Control system.

Setting colour temperatures

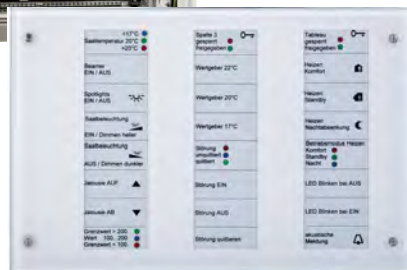

Sequences in the show creator

The control system for complex tasks, maximum flexibility and highest demands. In the conception of a project instalight Control offers complete freedom to efficiently realise your ideas.

instalight Control masters all common interfaces of modern building automation and thus is your first choice for a flexible control of complex light installations.

KNX Indication and operation panel
MBT2424

instalight Control 3.0: Advantages & characteristics

- > Automatic visualisation of the actuators and sensors connected to instalight Control
- > Intuitively operated light scene generators (Planets) allow the simple creation of impressive light animations
- > Transparent overlapping of several light scenes by means of layer technology and alpha blending
- > Direct visual control of the light scenes created by real-time display on the connected luminaires (live mode)
- > Programming of interactive functions such as RGB colour mixture via push button sensors
- > Fully automatic creation of light scenes and assignment to connected sensors
- > Clear operation by means of various stored user-levels – from beginner to professional
- > Continuous updating by means of free downloads via the InstaLighting website

instalight Control 3.0 can be downloaded in full version at:

www.instalighting.de > service > download

instalight Control DMX Master
50920000

DMX Master

Main Features

- > Intelligent link between instalight Control and USITT DMX512-A
- > Allows connection of up to 64 stations with DMX-interface to instalight Control
- > Replay-unit for control of DMX-stations – after commissioning no PC is needed for control
- > Control either self-sufficient or in a powerful interconnection with other masters and instalight Control components.
- > Support of basic RDM functions (Remote Device Management): Setting of DMX start address and operating mode (Personality) via instalight Control
- > Comfortable commissioning and creation of light scenes via user interface instalight Control SW
- > Operation via vast instalight Control sensor technology
- > Gateway for real-time display of light scenes in online-operation with PC and instalight Control SW (Live mode)

Specifications

Length	90 mm	Switching output	1 x two-way, bi-stable
Height	62 mm	Ambient temperature	0 ... +45 °C
Width	72 mm	RDM/DMX connection	2 x RDM/DMX bus (RJ-45)
Rated voltage DC	48 V	Interface	RDM/DMX
Power consumption (PoE)	max. 6.49 W	Data channels per universe	512
Current consumption	140 mA	Subscribers per universe	max. 32
Degree of protection	IP20	RDM/DMX Universes	2
Protection class	III	Data rate	100 Mbit/s
Switching voltage	AC 230 V ~	Design	RMD, 4 units
		Connection iControl	1 x LAN (RJ-45)

Accessories

**Adapter cable RJ45 plug –
5-pin. XLR socket**
58924055

instalight Control LEDTRIX Master
50913000

LEDTRIX Master

Main Features

- > Intelligent link between instalight Control and LEDTRIX field bus
- > Allows the connection of up to 160 LEDTRIX actuators at instalight Control
- > Replay-unit for the control of LEDTRIX actuators – after commissioning no PC is needed for the control
- > Control either self-sufficient or in a powerful interconnection with other masters and instalight Control components
- > Full instalight Control functionality: automatic structure resolution and addressing of the connected actuatorics
- > Comfortable commissioning and creation of light scenes via user-interface instalight Control SW
- > Operation via vast instalight Control sensor technology
- > Gateway for real-time display of light scenes in online-operation with PC and instalight Control SW (Live mode)

Specifications

Number of LEDTRIX universes	8
Length	90 mm
Height	61 mm
Width	144 mm
Rated voltage	DC 48 V (via ext. power supply or PoE according to IEEE 802.3af)
Power consumption (PoE)	approx. 4 W
Degree of protection	IP20

Protection class	III
Ambient temperature	0 ... +45 °C
Interface	LEDTRIX
Data channels per universe	max. 60
Subscribers per universe	max. 20
Design	RMD, 8 units
single stranded	max.2.5 mm ²

LEDTRIX Repeater IP 20, 2-way

58917000

LEDTRIX repeater

Main Features

- > The repeater duplicates the data received and parallelly distributes them to 2 outputs
- > The data received are regenerated. Thus the distance between a LEDTRIX sequencer (transmitter) and the first LEDTRIX actuator can be extended by 20 meters
- > In combination with the multiport, the repeater can be cascaded in max. 4 steps
- > Power supply is effected out of the LEDTRIX system

Specifications

Length	73 mm
Height	18 mm
Width	35.5 mm
Rated voltage	DC 28 V SELV
Power consumption	0.6 W
Degree of protection	IP20
Protection class	III
Short circuit protection	yes

Ambient temperature	-20 ... +45 °C
Protected against overheating	not necessary
No-load state	secured
Connections: outputs	2 LEDTRIX plugs
Connections: inputs	1 LEDTRIX socket
Laying instructions	SELV
Interface	LEDTRIX
Display-/operating elements	None

DMX-LEDTRIX Gateway 2 channel, built-in
51688014

DMX-LEDTRIX Gateway

Main Features

- > Compact gateway for connection of LEDTRIX actuators to DMX
- > DMX address to be set via rotary coding switch
- > Up to 100 metres cable length between gateway and first actuator possible
- > No programming required
- > Conversion of 96 DMX channels to two LEDTRIX universes with 48 channels each

Specifications

Length	175 mm	Protection class	III
Height	18 mm	Ambient temperature	-20 ... +45 °C
Width	42 mm	Laying instructions	SELV
Rated voltage	DC 28 V SELV	Interface	DMX / LEDTRIX
Power consumption	1 W	Number of DMX channels	96
Degree of protection	IP20	Number of channels	2 x 48 LEDTRIX data channels

DMX-PWM converter

59701090

DMX-PWM converter

Main Features

- > The DMX-PWM converter is used for brightness control of low-voltage LED lamps
- > DMX-telegrams are converted into PWM-signals
- > RMD-device with 6 PWM-outputs to control max. 6 groups single-colour
- > Different operation modes (parallel operation of the outputs, dimming behaviour) can be set
- > DMX-address to be set via rotary coding switches
- > Supply of the connected LED-lamps and the DMX-PWM converter via SNT ELI

Specifications

Length	72 mm
Height	62 mm
Width	90 mm
Rated voltage	DC 28 V SELV
Power consumption	1 W
Degree of protection	IP20
Protection class	III
Output current	max 1.5 A per output
Connected load	max. 2 x 126 W (ohmic)
Short circuit protection	yes

Required accessories	DMX adapter cable,
Ambient temperature	-5 ... +45°C
Dimensions	72 x 90 x 62 mm
Connections	20 screw terminals
Laying instructions	SELV
Interface	DMX
Number of DMX channels	6
DMX load resistance	120 Ohm integrated (to be cut in)
Operating elements	1 rotary mode switch
Design	RMD, 4 units

Accessories

DMX adapter cable (socket)
59200080

DMX adapter cable (plug)
59200081

KNX Gateway DMX-Web

13506112

KNX-DMX-Gateway

Intelligent system device, RMD-type, for coupling of DMX512 systems to KNX. To this effect, the KNX Gateway DMX-Web is connected to the KNX and the DMX512-bus. The gateway requires AC/DC24 V supply voltage.

Main Features

- > Web control with diagnosis function
- > DMX master or DMX slave
- > Objects like switching, dimming, value and feedback
- > Up to 1024 KNX objects
- > Up to 2000 connections
- > All 512 DMX channels supported
- > ETS4 database for synchronisation with DMX-Gate4

Specifications

Weight	175 kg	Protection class	III (SELV)
Rated voltage KNX	DC21 ... 32 V SELV	Ambient temperature	-5 ... +45 °C
Commissioning mode	S-mode	Storage/transport temperature	-25 ... +70 °C
Rated voltage	AC/DC24 V SELV	Interface	KNX / DMX
Power consumption	2 W	Number of DMX channels	512
Degree of protection	IP20	Design	RMD, 4 units
		DMX connection	Screw terminal

Accessories

**Power supply unit DC 24 V /
0.4 A**
14001913

KNX-DALI-Gateway plus TW

64544421

KNX-DALI-Gateway

Main Features

- > Operation of devices with DALI interface in instalight KNX systems
- > Control of up to 64 DALI devices in max. 32 different groups
- > Up to 64 individually-addressable DALI device channels
- > Tunable White: Control of DALI operating devices according to DALI DT8/TW
- > Integration into DALI emergency lighting systems possible (central battery systems)
- > Calling up and storing of max. 16 light scenes and 16 effects
- > Visualisation of operation states of the connected DALI devices
- > DALI groups can be operated manually
- > Staircase lighting function with switch-off prewarning and operating hours counter

Specifications

Rated voltage KNX	DC 21 ... 32 V SELV
Length	90 mm
KNX medium	TP 256
Height	62 mm
Width	72 mm
Commissioning mode	S-Mode
Cable length	300 m
Rated voltage	AC 110 ... 240 V ~
Rated voltage DC	110 ... 240 V
Mains frequency	50 ... 60 Hz
Power consumption KNX	typ. 150 mW

Controllable channels	32
Short circuit protection	yes
Ambient temperature	-5 ... +45 °C
No-load state	secured
Storage/transport temperature	-25 ... +70 °C
Interface	KNX / DALI
Display-/operating elements	4 buttons, 3 LED, 1 LED display
Design	RMD, 4 units
DALI rated voltage	DC16 V
Number of DALI subscribers	max.64
DALI protocol	EN 62386
Power loss	max. 3 W

DALI Power Potentiometer, flush mounting

51167002

DALI control unit

Main Features

- > DALI control unit with integrated power supply
- > allows a common brightness control (broadcast) of up to 26 DALI stations without additional DALI power supply
- > Parallel switching of up to four DALI power potis extends the maximum number of DALI stations to 104
- > Use of further DALI power potis as extension (without connection of the integrated power supply)
- > Switching / dimming by pressing / turning the operation button
- > Storing of basic brightness and switch-on brightness

Specifications

Length	70.7 mm	Output current	max. 52 mA
Height	32 mm	Ambient temperature	-5 ... +45 °C
Width	70.7 mm	Connections	Screw terminals
Cable length	300 m	Interface	DALI
Rated voltage	AC 230 V~	DALI rated voltage	DC 16 V (typ)
Mains frequency	50 / 60 Hz	Number of DALI subscribers	max. 26
Power consumption	2 W	Number of active DALI potentiometers	max. 4
		single stranded	1 ... 4 mm ²

Accessories

To ensure for a reliable and durable service from your lights, the appropriate operating device is an indispensable appliance.

Perfectly tailored to your lighting, it will for example, manage the current and voltage supply and ensure at the same time that it does not come to any power overloads, short-circuits or excessive temperatures. Apart from this, suitable operating units can be sensibly used for the repetition of data signals to overcome larger distances between control units and lighting. No matter what structural conditions you may face on site, the unit can either be installed within a protective surrounding or a sealed cabinet such as protection class IP66, suitable for immediate use in harsh environments.

Please choose from the following pages, the required and appropriate operating unit which you need for your particular case.

SNT ELI 0-120 W

58916023

Power supply for LED

Main Features

- > Powerful system power-supply unit for operation of low-voltage LED applications
- > High efficiency by modern topology of the switched-mode power supply
- > Automatic switch-off in case of overload, short-circuit or over-temperature
- > Electronic inrush-current limitation integrated
- > Also suitable for DC operation (emergency power operation)

Specifications

Rated voltage AC	110 ... 240 V ~
Rated voltage DC	175 ... 275 V
Mains frequency	47 ... 63 Hz
Power factor	0.99
Primary current	1,1 A (120 W / 110 V)
Protection class	I
Output voltage	DC 28.5 V =
Output current	4.3 A
Connected load	0 ... 120 W

Efficiency	93 % (at 230 V)
Ambient temperature	-20 ... +45 °C
Length	205 mm
Width	106 mm
Height	51 mm
Short-circuit current	max. 5.5 A
single stranded	max. 4 mm ²
Finely stranded with conductor sleeve	max. 2.5 mm ²
Fine-wire	max. 2.5 mm ²
Storage/transport temperature	-20 ... 85 °C

SNT ELI 0-110 W / 30 V

50930074

Power supply for LED, IP67

Main Features

- > Powerful system power-supply unit for operation of low-voltage LED applications
- > High efficiency by modern topology of the switched-mode power supply
- > Automatic switch-off in case of overload, short-circuit or over-temperature
- > Encapsulated aluminium housing for durable operation in indoor and outdoor areas

Specifications

Rated voltage	AC 100 ... 277 V~
Mains frequency	50 / 60 Hz
Power factor	0.96
Primary current	0.7 A (@230 V) / 1.5 A (@110 V)
Degree of protection	IP67
Protection class	I
Secondary voltage	DC 30 V =, SELV
Output current	0 ... 3.7 A
Connected load	0 ... 110 W
Short circuit protection	yes
Efficiency	93 %

Ambient temperature	-40 ... +60 °C
Housing temperature t_c	max. 80 °C
Overload / temp. protection	yes
Length	221 mm
Width	69 mm
Height	40 mm
Connection cable primary	ca. 300 mm
Connection cable sec.	ca. 300 mm
Weight	1.1 kg
Secondary cable length	max. 100 m
Storage/transport temperature	-40 ... +80 °C

Supply unit 0-120 W / AM

58920027

Power supply for LED, IP66

Main Features

- > Supply unit for single-colour and RGB lines
- > Internal switch A/M

Specifications

Rated voltage	AC 230 / 240 V~
Mains frequency	50 / 60 Hz
Degree of protection	IP66
Protection class	I
Secondary voltage	DC 28.5 V SELV
Output current	max. 4.3 A
Connected load	0 ... 120 W

Ambient temperature	-20 ... +45 °C
Length	254 mm
Width	180 mm
Height	90 mm
Connection mode	1 x plug / 1 x socket (3-pole)
Material	Plastic
Short-circuit protection	electronic

Accessories

End plug
58926010

58926011

SNT ELI 0-90W IP66

DCV 090 30 IP66 2

Power supply for LED, IP66**Main Features**

- > Electronic operating device for connection of LED modules that are operated with extra low voltage (SELV) according to EN 61347-1 and EN 61347-2-13
- > Suitable for the operation of LED emergency lighting at the central supply according to DIN EN 60598-2-22
- > Automatic switch-off in case of short-circuit or over-temperature
- > Use indoors or outdoors (IP66)

Specifications

Rated voltage	AC 230 / 240 V~
Rated voltage DC	176...264 V
Mains frequency	50 / 60 Hz
Power factor λ	0.96 (at 230 V)
Primary current	max. 0.5 A (at 230 V)
Inrush current	max. 55 A (435 μ s)
Degree of protection	IP66
Protection class	II
Secondary voltage	DC 30 V= SELV

Connected load	0 ... 90 W
Short-circuit protection	electronic
Leakage current	<0.75 mA
Ambient temperature t_a	-25°C ... +35°C
No-load proof	yes
Storage/transport temperature	-25 ... +70°C
Length	254 mm
Width	180 mm
Height	110 mm
Housing type	Plastic

Accessories

Power supply for LED**Main Features**

- > System power supply of medium capacity for operation of low-voltage LEDs with constant voltage
- > High efficiency by modern topology of the switched-mode power supply
- > Automatic switch-off in case of overload, short-circuit or over-temperature

**Specifications**

Rated voltage	AC 230 V ~	Output current	0 ... 2040 mA
Mains frequency	50 / 60 Hz	Connected load	0 ... 57 W
Power factor	0.95	Ambient temperature	-20 ... +45 °C
Standby Power consumption	1.0 W	Housing temperature t_c	75 °C
Primary current	max. 300 mA	Length	270 mm
Degree of protection	IP40	Width	33 mm
Protection class	II	Height	23 mm
Output voltage	DC 28 V SELV	Weight	0.15 kg

Supply Unit 0-57 W IP66

DCV 057 28 IP66 2

Power supply for LED, IP66

Main Features

- > Electronic operating device for connection of LED modules that are operated with extra low voltage (SELV) according to EN 61347-1 and EN 61347-2-13
- > Suitable for the operation of LED emergency lighting at the central supply according to DIN EN 60598-2-22
- > Automatic switch-off in case of short-circuit or over-temperature
- > Use indoors or outdoors (IP66)

Specifications

Rated voltage	AC 230 V ~	Protection class	II
Mains frequency	50 / 60 Hz	Output voltage	DC 28 V
Power consumption	67 W	Connected load	0 ... 57 W
Power factor λ	0,85	Ambient temperature t_a	-20 ... +35 °C
Current consumption	max. 300 mA	Length	320 mm
Standby Power consumption	max. 1,0 W	Width	100 mm
Inrush current	max. 22 A / $I^2t=0,09 \text{ A}^2\text{s}$	Height	81 mm
Degree of protection	IP66	Storage/transport temperature	-20 ... +75 °C

LED driver 32 W 700 mA DALI V2

58919011

Power supply for LED, DALI

Main Features

- > Switched-mode power supply for operation of LED module
- > Two operation modes can be chosen via micro-switch: Operation with constant current 350/500/550/700 mA, Operation with constant voltage 10/12/24 V
- > Dimmable via DALI input
- > Electronic overload and short-circuit protection
- > Electronic over-temperature protection acc. to EN 61347-1 C.5.a
- > Temperature-depending power reduction via external NTC

Specifications

Rated voltage	AC 110...240 V~
Rated voltage DC	220 / 240 V
Mains frequency	50 / 60 Hz
Power factor	0.95
Primary current	max. 0.18 A
Degree of protection	IP20
Protection class	II
Output voltage	max 59 V SELV
Output current	250 ... 700 mA

Connected load	max. 32 W
Short circuit protection	yes
Ambient temperature	-25 °C...+45 °C
Housing temperature tc	75 °C
Overload / temp. protection	yes
Length	103 mm
Width	67 mm
Height	21 mm
Interface	DALI
Switch-on current 50 µs	5 A

LED driver 20 W 300-1000 mA

50900301

Current supply for LED, 1-10 V

Main Features

- > Compact power supply unit for connection of current-driven LEDs with a total capacity of max. 20 W
- > Output current adjustable 300 to 1000 mA
- > Dimmable 0-100% via 1-10 V, potentiometer or push-button
- > Idle-run and short-circuit proof, over-temperature protection
- > With ready-for-connection plug system

Specifications

Rated voltage	AC 110...240 V~
Mains frequency	50 / 60 Hz
Power consumption	24 W
Power factor	0.9
Degree of protection	IP20
Protection class	II
Output voltage	max. DC 33 V (SELV equiv.)
Secondary voltage	max. DC 33 V
Output current output 1	250 ... 1000 mA
Output current output 2	250 ... 500 mA
Connected load	1 ... 20 W
Short circuit protection	yes

Efficiency	85 %
Ambient temperature	-20 ... +50 °C
Housing temperature tc	< 85 °C
Overload / temp. protection	yes
Length	109 mm
Width	52 mm
Height	25 mm
Connection cable primary	H03VVH2-F 2x0.75 mm ²
Connection cable sec.	Plug system 2-pole flexible, 2x0.25 mm ²
Dimmable/Controllable	yes
Interface	1 - 10 V
Weight	0.1 kg

LED driver 12 W 350/700 mA

50900300

Current supply for LED

Main Features

- > Compact power supply unit for connection of current-driven LEDs with a total capacity of max. 12 W
- > Output current switchable between 350 or 700 mA
- > Idle-run and short-circuit proof, over-temperature protection
- > With ready-for-connection plug system

Specifications

Rated voltage	AC 110...240 V~
Mains frequency	50 / 60 Hz
Power consumption	14.6 W
Power factor	0.9
Degree of protection	IP20
Protection class	II
Output voltage	max. DC 33 V (SELV equiv.)
Output current	350 / 700 mA switchable
Connected load	1 ... 12 W

Number of LEDs at 350 mA	9
Number of LEDs at 700 mA	5
Ambient temperature	-20 ... +50 °C
Housing temperature t_c	< 85 °C
Overload / temp. protection	yes
Length	99 mm
Width	38 mm
Height	24 mm
Connection cable primary	H03VVH2-F 2x0.75 mm ²
Connection cable sec.	Plug system 2-pole flexible, 2x0.25 mm ²

Pictograms

Degree of protection IP

IP20

Classification of protection of devices (luminaires) against penetration of solid objects or liquids. The information on the IP code is made acc. to EN 60529; It consists of the abbreviation IP (International Protection) and two figures indicating the degree of protection.

IP XX (XX for first and second figure)

1st figure: protection against penetration of solid substances

- 0 unprotected
- 1 Protected against solid foreign substances larger than 50 mm
- 2 Protected against solid foreign substances larger than 12.5 mm
- 3 Protected against solid foreign substances larger than 2.5 mm
- 4 Protected against solid foreign substances larger than 1 mm
- 5 Protected against dust in harming quantity
- 6 dust-proof

2nd figure: protection against penetration of liquids

- 0 unprotected
- 1 drip-proof
- 2 drip-proof inclined under 15°
- 3 spray-proof
- 4 splash-proof
- 5 protected against jet-water
- 6 protected against heavy jet-water
- 7 protected against temporary submersion into water
- 8 protected against permanent submersion into water (+ water depth in metres and period of resistance)
- 9 according to ISO 20653: protected against high-pressure hot steam cleaner
- 9K according to ISO 40050-9: protected against high-pressure hot steam cleaner

SDCM

During the installation of several luminaires equipped with LED chips, an homogenous colour impression is decisive. SDCM (Standard Deviation of Colour Matching) is a degree for the admissible deviation of colour matching of individual LED within a certain product range of a manufacturer from the relevant target colour point. The higher the figures, the higher the colour deviation. At a deviation of SDCM <4 the human eye can hardly make out any colour difference. Generally, Insta luminaires for general lighting have LED gradings with deviations SDCM 3 or 2 and thus meet highest demands on modern lighting.

Protection class I

Luminaire which is protected against electrical shock not only by the basic isolation but by an additional safety precaution of such kind that touchable, conducting parts are equipped with means for connection to the protective conductor of the firm installation, so that in case of a fault of the basic isolation touchable, conducting parts cannot be active.

Protection class II

Luminaire which is protected against electrical shock not only by the basic isolation but by an additional safety precaution like additional or reinforced isolation. There are neither provisions for the connection of a protective conductor, nor is protection based on the installation regulations.

Protection class III

Luminaire whose protection against electrical shock is based on the application of protective extra-low voltage.

LED

Light generation in the luminaire is exclusively effected by LED. LED (Light Emitting Diodes) are electronic semi-conductor elements whose light generation is based on the physical principle of recombination. LED are maintenance-friendly and extremely effective lamps.

VDU workplace

With regard to radiation characteristics and glare elimination, the luminaire meets all demands on illumination of VDU workplaces acc. to EN 12464-1 and ASR A3.4.

Brightness 0-100%

The luminaire can be dimmed and thus the brightness can be adjusted from 0-100%. The control device to adjust the brightness is either integrated or is required as external device. Further information can be found in the article description.

Static pressure load

Maximum continuous vertical load on a built-in floor luminaire if the load is evenly distributed over the whole light output surface. Indications in kiloNewton: 10 kiloNewton (kN) correspond to approx. 1.02 tons (t).

Light colour RGB

The luminaire is equipped with the basic colours red (R), green (G) and blue (B). By additive mixture of the basic colours, any desired light colour can be displayed.

Ability to be traversed by vehicles

Maximum total weight of vehicles (cars or lorries used for delivery), by which a built-in floor luminaire can be traversed. Indications in kiloNewton: 10 kiloNewton (kN) correspond to approx. 1.02 tons (t).

Light colour RGBW

In addition to the basic colours red (R), green (G) and blue (B), the luminaire is equipped with additional, separately controllable white LED (W). By additive mixtures of the basic colours any desired colour can be displayed, while the white LED makes perfect pastel colours and brilliant white light possible.

Impact strength (IK-code)

Classification of the protection of a luminaire against mechanical stress from outside. Indication by definition of the IK-code acc. to DIN EN 50102 (VDE 0470 part 100) »Degrees of protection provided by enclosures for electrical equipment against external mechanical impacts«. The IK-code is determined by means of a hammer test acc. to DIN EN 60068-2-75.

Light colour Tunable White (TW)

The luminaire is equipped with white LED of different colour temperatures as well as with an integrated intelligent control, so that not only the brightness but also the light colour can be adjusted within a defined range.

IK-Code Stress energy [W] in Joule

IK01	0,14	IK06	1
IK02	0,2	IK07	2
IK03	0,35	IK08	5
IK04	0,5	IK09	10
IK05	0,7	IK10	20

DALI

The luminaire has got an integrated interface for lighting control via DALI (Digital Addressable Lighting Interface). DALI is an international standard for digital control of up to 64 luminaires per system. Here the control cable can be laid together with the supply cable and reach a length of up to 300 m.

With luminaires whose light output surface and housing have different IK codes, both values are indicated as follows: IK (housing) / IK (light output surface).

Pictograms

Interface

The luminaire / component has got a digital or analogue interface by which colour and/or brightness can be controlled. The type of control is described by the abbreviation under the pictogram:

LX	Control via instalight Control LEDTRIX-Master or instalight Vario
DMX	Control via USITT DMX512-A e. g. instalight Control DMX-Master
IP	Control via an IP network
1-10 V	Analog brightness control via external 1-10-V control devices
RF	Wireless radio control
PWM	Control via an external power unit, which sets the brightness of the LEDs by quick switching On/Off (pulse width modulation)
KNX	Control via the world-wide standardised field bus for building automation
binary	Control via logic inputs e.g. with standard installation push-buttons

Stainless Steel

V4A

The luminaire is made of non-corrosive stainless steel. Depending on the environmental conditions to be expected at the place of installation, InstaLighting uses two materials:

V4A: material No. 1.4401 (AISI 316), 1.4404 (AISI 316L) or 1.4571 (AISI 316Ti)

The steel shows an excellent resistance to a variety of media including hot petroleum products, vapour and combustion gases. With InstaLighting it is used for all inground luminaires.

V2A: material No. 1.4301 (AISI 304)

The steel is resistant to water, water vapour, humidity, edible acids and weak organic and inorganic acids. With InstaLighting, it is used mainly for façade lighting systems.

On customer demand, luminaires made of V2A can also be fabricated in V4A. Furthermore, for particular environmental impacts InstaLighting offers further finishings, e.g. an electro-polished surface.

InstaLighting

is a registered trademark of Instalighting GmbH

Notes on trademarks of third parties:
Apple, App Store, iPhone and Apple Watch
are trademarks or registered trademarks of Apple Inc.

Our customers make highest demands on our products. Innovation potential and quality are as important as flexible use of the products conforming to standards. In order to reach these targets, we follow strict criteria in development and production.

CE-sign and conformity

- The manufacturer declares that all requirements of all EU guidelines relevant for the product have been complied with. The requirements are described in harmonized standards.
- Compliance with the requirements is monitored by tests and documented in test reports. Conformity with the requirements is declared by InstaLighting in the EU declaration of conformity which is accessible at www.instalighting.de.
- For LED lighting technology two safety-relevant standards of the low-voltage directive have to be observed, like DIN EN 62471 (photobiological safety (eye safety) of lamps and systems, and DIN EN 62493 on human exposure to electromagnetic fields of lighting systems.

Further directives and regulations

- The WEEE directive (Waste Electrical and Electronic Equipment) bindingly determines the disposal of electrical and electronic appliances - which devices are concerned, how they have to be disposed of as well as marking of the same. InstaLighting luminaires and other components with electronic parts which are marked with the dust-bin, have to be disposed of at the end of their useful life with the regional waste collection centres.
- The European RoHS directive 2011/65/EU (Restriction of hazardous substances) restricts the use of certain hazardous substances. Therefore, InstaLighting electronic products are soldered lead-free. InstaLighting processes only goods complying with the relevant directives, and ensures this by our own actions.
- The REACH directive 1907/2006 (EG) (Registration, evaluation, authorisation and restriction of chemicals) manages the handling of chemicals in the fabrication of products. In particular, this implies information obligations, limitations of use and registrations of substances. In the whole supply chain, InstaLighting is neither manufacturer of substances nor of preparations, nor importer. As so-called „downstream user“ InstaLighting depends on corresponding declarations from the individual manufacturers. Our conditions of purchase make sure that InstaLighting only receives goods complying with the REACH directive and its amendments.
